

Global API GTM

MARKETING STRATEGY 2026

1. Executive Summary

The plan is grounded in analysis of the existing customer base (95 accounts across 20+ countries), the outbound dream list (1,865 unique target companies across 2,530+ prospect contacts), and insights from acquisition patterns that reveal what worked and what did not in recent quarters.

Key Numbers at a Glance

Metric	Value
Total Target Accounts (Dream List)	1,865 unique companies
Total Prospect Contacts Identified	2,530+
1st Priority Segment Companies	635 (H&W: 274 Neo Banking: 277 E-Wallets: 84)
2nd Priority Segment Companies	754 (Employee R&R: 123 Fringe Benefits: 29 Market Research: 602)
Existing KAM Accounts	95 across 20+ countries
Top Existing Industries	Fintech & BFSI (17) Market Research (8) Travel (8) Loyalty (7)
Top Geographies (Existing)	India (48) UK (13) USA (11) France (4) South Korea (4)
Primary Product	Plum Pro API (46% of existing accounts)
2026 Marketing Pipeline Target (Hunting + Farming + Partnership)	\$1,624,713 (ABM - \$181,821, SEO - \$1,110,428, Events - \$332,464)
2026 Marketing SQL Targets	626 (ABM - 47, SEO - 334, Events - 100)

2. Situation Analysis

2.1 What Worked (Insights from Acquisition History)

- Perks API (Viwell/HDB):** Strong product-market fit for health & wellness and banking apps seeking zero-cost engagement layers.
- Salesforce Integration (Behr):** Pre-built connectors with enterprise platforms like Salesforce Loyalty Cloud accelerated deal velocity.
- Links Expiry Model:** Creating urgency through time-bound reward links improved conversion and redemption rates.
- Banking Clients (HDB/Fino/Suryoday):** BFSI segment proved high-value with strong recurring revenue patterns.

- **Events:** Helped build relationships with existing accounts, generated new prospects, and enabled face-to-face trust-building.
- **Loyalife SaaS (Worldia):** SaaS-led deals delivered stronger NR margins versus pure GMV-based engagements.

2.2 What Did Not Work

- **High Meetings, Low Deal Value:** Volume of meetings did not translate proportionally to pipeline value—indicating targeting or qualification issues.
- **Partner Leads:** Quality and conversion from partner-referred leads underperformed direct outbound.
- **Use Case Allocation:** Insufficient alignment between sales POC industry expertise and assigned verticals.
- **Fewer Leads from CAM:** Customer Account Management contributed fewer qualified leads than expected.
- **Supply Stability:** Catalogue gaps and vendor availability issues led to deal friction, especially in niche geographies.
- **PayPal Integration:** Didn't gain traction—likely due to PayPal's own competitive reward infrastructure.

2.3 Existing Customer Profile (KAM Analysis)

The current book of 95 accounts provides a clear pattern for ideal customer profile (ICP) development:

Attribute	Top Segments
Industry	Fintech & BFSI (17) Market Research (8) Travel & Hospitality (8) Loyalty Platforms (7) Employee Engagement (6) Manufacturing (5) Health & Wellness (5)
Geography	India (48) United Kingdom (13) United States (11) France (4) South Korea (4) UAE (2) Singapore (2)
Employee Size	51–250 (22) Unknown/Large (17) 26–50 (16) 1,001–5,000 (13) 10,000+ (8)
Product Used	Plum Pro API (44) Marketplace SSO (12) Xoxo Link Dashboard (12) Plum Pro Dashboard (7) LBMS (4)
Customer Type	Direct (majority) Channel Partners (minority)
Acquisition Source	Inbound (4) Self-Generated (3) Reference/Outbound (2)

3. Target Segments & Prioritisation

3.1 First Priority Segments

These segments represent the highest revenue potential and most immediate pipeline opportunity. All three align with Plum’s core strength as a burn engine for open-loop loyalty programmes. Each segment includes two campaign sequences: a LinkedIn InMail sequence (for direct prospect outreach via LinkedIn) and an ABM email sequence (for multi-stakeholder nurture via email).

A. Health & Wellness Apps (B2C) — 274 Companies

Parameter	Details
Channels	LinkedIn InMail Sequence + ABM Email Sequence
Sales Cycle	Short (3–6 months)—fast decision-making, fewer compliance gates
Key Use Cases	Step/activity rewards, wellness challenge incentives, subscription referral bonuses, gamified health engagement
Target Personas	Head of Product, Growth/Partnerships Lead, Head of Engagement, CTO
Core Pitch	Plum as the burn engine: users earn points for healthy behaviours (your earn engine), redeem on a global rewards marketplace (our burn engine)
Key Differentiators	10,000+ reward options in 100+ countries, zero-code fraud prevention, API-first with 2–3 week go-live, Perks API for zero-cost engagement layer
Competitive Landscape	Tremendous (limited to gift cards), Rybbon (email-based), Tango Card (US-only)
Proof Points	Viwell (Perks API success), Curefit (customer rewards on subscription), BetFit, FitVerse

LinkedIn InMail Sequence — Health & Wellness

Duration: 4-touch sequence.

Target Personas: Head of Product, Growth Lead, Head of Engagement.

Touch 1: Introduction — Value Hook
Subject: Your users earn health points. What do they redeem them for?
Hi {{FirstName}}, I’ve been following {{CompanyName}}’s work in the wellness space — impressive growth in driving user engagement around healthy habits. Quick question: when your users hit step goals or complete wellness challenges, what does the reward experience look like for them? Most health & wellness apps we speak with have built a strong earn engine but struggle with the burn side — limited reward options, single-geography catalogues, or high fulfilment overhead. We power the rewards infrastructure for apps like Viwell and Curefit, giving their users instant access to 10,000+ reward options (gift cards, experiences, dining, subscriptions, and more) across 100+ countries — all through a single API integration.

Reply to this email if a 15-minute chat would be worth it to see how this could complement what you're building at {{CompanyName}}.

Best,

{{SenderName}}

Touch 2: Value Proof — Use Case Relevance

Subject: How {{SimilarCompany}} increased reward redemption by 3x

Hi {{FirstName}},

Following up on my earlier note. I wanted to share something specific that might resonate.

One of our wellness app clients was struggling with low redemption rates on their in-app rewards. Users were earning points but not converting them — because the reward catalogue was limited to a handful of local gift cards.

After integrating Plum's Rewards API, they expanded to 10,000+ options across 100+ countries. Within 90 days, redemption rates tripled and monthly active users on the rewards page grew by 40%.

The integration took under 3 weeks, and they're now also using our Perks API to offer always-on discounts to users at zero cost to them.

I'd love to show you a quick sandbox demo tailored to {{CompanyName}}'s use case. Would any time next week work for 15 minutes? Simply reply to this email.

Best,

{{SenderName}}

Touch 3: Competitive Differentiation

Subject: Gift cards alone aren't enough for wellness rewards

Hi {{FirstName}},

One trend we're seeing across health & wellness apps: users want choice, not just gift cards. When someone earns rewards for hitting a fitness goal, they want to redeem for things that matter to them — a spa experience, a restaurant voucher, a charity donation, a Netflix subscription.

This is where Plum differs from alternatives like Tremendous or Tango Card. We're not a gift-card-only platform. Through one API, your users get access to gift cards, experiences, merchandise, lounge access, charity donations, mobile top-ups, and perks — localised to their country.

And our Perks API gives you a zero-cost engagement layer: always-on merchant discounts your users can access without burning a single point.

Happy to walk you through a live demo if useful. Reply to this email with a time and date that works for you.

Best,

{{SenderName}}

Touch 4: Final Touch — Low-Friction CTA

Subject: Free sandbox access for {{CompanyName}} — no commitment

Hi {{FirstName}},

I don't want to keep filling your inbox, so this will be my last note for now.

If you're exploring reward infrastructure for {{CompanyName}} at any point this year, I'd like to offer you complimentary sandbox access to Plum's API. You can test the full catalogue, simulate orders, and see how it integrates with your existing earn engine — all without any commitment.

If the timing isn't right now, no worries at all. I'll check back in a few months. But if rewards are on your roadmap, I'd genuinely love to help. Just hit reply to this email.

All the best,

{{SenderName}}

ABM Email Sequence — Health & Wellness

Duration: 4-email campaign.

Target Personas: Broader stakeholder groups (Product, Engineering, Partnerships, Growth) at the same target accounts.

Designed to run concurrently with the InMail sequence to create multi-channel surround-sound.

Email 1: *Industry Trend — Educational Entry*

Subject: The wellness apps winning on retention all have this in common

Hi {{FirstName}},

There's an emerging pattern among the fastest-growing health & wellness apps: the ones with the strongest retention aren't just gamifying health goals — they're giving users real, tangible rewards for achieving them.

Step challenges, meditation streaks, nutrition logging — these features drive initial engagement. But what keeps users coming back week after week is a meaningful redemption experience: choosing a gift card, booking an experience, or donating to a cause they care about.

If this is relevant to what {{CompanyName}} is building, happy to discuss further. Simply reply to this email.

Best,

{{SenderName}}

Email 2: *Product-Led — How It Works*

Subject: How wellness apps integrate a global rewards catalogue in under 3 weeks

Hi {{FirstName}},

Thought this might be useful for your product/engineering team.

Here's what a typical integration looks like for wellness apps working with Xoxoday Plum:

Day 1–2: Sandbox access and API walkthrough. Your team gets full documentation, Postman collections, and a dedicated onboarding engineer.

Week 1: Integration build. Connect your earn engine to our Rewards API. Configure catalogue filters by country, category, and denomination.

Week 2–3: Testing and go-live. End-to-end testing in sandbox, followed by production deployment. First reward redemptions go live.

Through that single integration, your users get access to gift cards, experiences, dining, merchandise, subscriptions, mobile top-ups, charity donations, and always-on perks — localised by country.

We also offer a fully white-labelled storefront option if you prefer a plug-and-play UI instead of building your own.

Reply to this email if a 15-minute technical walkthrough would be helpful for your team.

Best,

{{SenderName}}

Email 3: Social Proof — Case Study Angle

Subject: How a wellness app grew reward redemptions 3x in 90 days

Hi {{FirstName}},

Quick case study that might resonate with what you're working on at {{CompanyName}}.

A B2C wellness app was rewarding users with a limited catalogue of 50 local gift cards. Redemption rates were under 15%, and the rewards page had become an afterthought.

After integrating Plum, they expanded to 10,000+ reward options across 100+ countries — gift cards, experiences, dining, subscriptions, charity, and more. Within 90 days:

- Redemption rates tripled to 45%
- Rewards page MAU grew by 40%
- User-reported NPS increased by 12 points

They also activated our Perks API — always-on merchant discounts at zero cost — as a base-layer benefit for all users, even before they earn enough points to redeem.

I'd be happy to discuss the full case study. Just reply and I'll schedule a quick meeting.

Best,

{{SenderName}}

Email 4: Direct CTA — Sandbox Offer

Subject: Try Plum free on {{CompanyName}}'s next wellness campaign

Hi {{FirstName}},

Last note in this series. If rewards infrastructure is anywhere on {{CompanyName}}'s roadmap this year, here's a no-risk way to evaluate fit:

We'll set up a complimentary sandbox environment for your team. You can browse the full global catalogue, simulate reward orders, test the API endpoints, and preview the white-labelled storefront — all without any commitment or cost.

If the timing isn't right now, completely understood. But if it is, this is the fastest way for your product team to evaluate whether Plum is the right burn engine for your earn engine. Simply reply to this email and we can discuss how to get you started.

Best,

{{SenderName}}

B. Digital Neo Banking — 277 Companies

Parameter	Details
Channels	LinkedIn InMail Sequence + ABM Email Sequence
Sales Cycle	Long (6–12+ months)—heavy compliance, procurement, and infosec gates
Key Use Cases	Loyalty point redemption marketplace, cashback-to-gift-card conversion, tiered banking rewards, onboarding bonuses, referral rewards
Target Personas	Head of Loyalty/Rewards, Chief Product Officer, Head of Digital Banking, VP Partnerships
Core Pitch	Plum as the burn engine for open-loop loyalty. Compliance-ready: SOC 2 Type II, GDPR, ISO 27001.
Key Differentiators	Robust compliance & security (SOC 2, GDPR, ISO 27001), multi-currency & multi-lingual storefront, lounge access API, white-labelled storefront live in 2–3 weeks
Competitive Landscape	Collinson Group (legacy integration), DragonPass/Priority Pass (lounge-only), InComm/Blackhawk (card-first)
Proof Points	HDB Financial Services, Fino Bank, Suryoday Small Finance Bank, Bank Audi (exploration)

LinkedIn InMail Sequence — Neo Banking

Duration: 5-touch sequence. Extended cadence reflects the long sales cycle.

Target Personas: Head of Loyalty, CPO, VP Partnerships.

Touch 1: Thought Leadership Entry

Subject: Open-loop vs. closed-loop loyalty — a shift digital banks can't ignore

Hi {{FirstName}},

Closed-loop loyalty programmes are losing ground in digital banking. When customers can only redeem points within a single brand's ecosystem, engagement plateaus and point liabilities grow.

The shift we're seeing across leading neo banks is towards open-loop loyalty — where customers earn through banking activities and redeem across a global, multi-category marketplace. Gift cards, experiences, lounge access, merchandise, charity, and more.

Happy to have a conversation on open-loop models, why they deliver 2–3x higher redemption rates and how they reduce point liability exposure.

Simply to this email if it's relevant to what you're evaluating at {{CompanyName}}.

Best,

{{SenderName}}

Touch 2: Compliance-First Value Prop

Subject: Security-first rewards infrastructure for {{CompanyName}}

Hi {{FirstName}},

When we work with banking and financial services clients, the first conversation is always about compliance — not features. So let me lead with that.

Xoxoday Plum is SOC 2 Type II certified, GDPR-compliant, and ISO 27001 certified. We support data residency requirements across multiple jurisdictions, and our platform is built with bank-grade security from the ground up — device fingerprinting, order limits, and audit-grade reconciliation reporting.

Beyond compliance, here's what we provide: a single API integration that gives your customers access to 10,000+ reward options in 100+ countries — or a fully white-labelled storefront that goes live in 2–3 weeks under your brand.

Your customers earn through your banking products. We power the redemption experience. No catalogue to build. No vendor management. No fulfilment complexity.

Would a brief call to discuss architecture, integration and compliance overview be worthwhile?

Best,

{{SenderName}}

Touch 3: Proof Point — Banking Use Case

Subject: How financial services clients use Plum as their redemption layer

Hi {{FirstName}},

A quick snapshot of how banking clients are using Plum today:

— A small finance bank in India uses our API to power cashback-to-gift-card conversion for 500,000+ customers. Redemption rates increased by 65% after moving from a closed-loop catalogue.

— A travel-focused financial services company in the US embedded our white-labelled storefront as a rewards hub for their premium cardholders. Go-live took 3 weeks. They now offer travel bookings, gift cards, lounge access, and experiences — all under their own brand.

— A loyalty platform in the UK uses our Plum Pro API to power reward redemption for multiple bank clients, acting as a channel partner with white-label flexibility.

I believe there's a strong parallel with what {{CompanyName}} could achieve. Would a 20-minute walkthrough of our sandbox environment be useful to your product/loyalty team?

Best,

{{SenderName}}

Touch 4: Nurture Check-In — New Capability

Subject: New: lounge access API for premium banking rewards

Hi {{FirstName}},

A quick update that may be relevant to {{CompanyName}}'s loyalty roadmap.

We've expanded our Lounge Access API to cover 1,200+ airport lounges globally. Digital banks are using this as a premium-tier benefit — customers scan a QR code from the banking app and walk straight into the lounge. No separate card. No Priority Pass partnership required.

This sits alongside our gift card, experience, merchandise, and charity APIs, all accessible through a single integration.

If premium banking rewards are on your 2026 roadmap, I'd love to show you how this works in our sandbox. No commitment, just a look under the hood.

Best,

{{SenderName}}

ABM Email Sequence — Neo Banking

4-email campaign over 12 weeks. Compliance-led messaging designed to reach infosec, procurement, and product stakeholders concurrently. Runs alongside the InMail sequence targeting the Loyalty/Partnerships function.

Email 1: *Compliance Authority — Trust Entry*

Subject: Rewards infrastructure built for banking-grade compliance

Hi {{FirstName}},

When digital banks evaluate a rewards technology partner, the conversation starts with compliance — not features. We understand that, and we've built accordingly.

Xoxoday Plum holds SOC 2 Type II, ISO 27001, and GDPR certifications. Our infrastructure supports data residency across multiple jurisdictions, enforces device-level fraud detection, and provides audit-grade financial reconciliation for every transaction.

We work with banks and financial services companies across India, the UK, the US, and the Middle East — powering loyalty reward redemption for programmes serving hundreds of thousands of end users.

If it would be helpful, we're happy to schedule a dedicated security architecture walkthrough and compliance overview discussion for your infosec team. Hit reply to email with a time and date that works for you.

Best,

{{SenderName}}

Email 2: *Thought Leadership — Industry Shift*

Subject: Why the smartest digital banks are abandoning closed-loop loyalty

Hi {{FirstName}},

A quick industry data point for your team:

Banks running closed-loop loyalty programmes (where customers can only redeem within the bank's own ecosystem) are seeing redemption rates below 20%. Those running open-loop programmes (where customers choose from a global marketplace of gift cards, experiences, travel, merchandise, and more) are seeing rates above 50%.

The difference matters financially. Low redemption means growing point liabilities on the balance sheet. High redemption means active engagement and controlled liability burn.

If loyalty programme optimisation is on {{CompanyName}}'s agenda, I'd welcome a conversation about how we can help.

Best,

{{SenderName}}

Email 3: *Architecture — Technical Deep Dive*

Subject: Two ways to launch a rewards marketplace — API or storefront

Hi {{FirstName}},

Sharing this for your product and engineering teams at {{CompanyName}}.

When banks work with us, they typically choose one of two integration paths:

Option 1: API Integration - Full control over the user experience. Your team builds the redemption UI; our APIs power the catalogue, ordering, fulfilment, and reconciliation. Ideal for banks with mature tech stacks and custom UX requirements.

Option 2: White-Labelled Storefront - A fully branded rewards marketplace embedded in your app or portal. Your logo, your point currency name, your colours. Admin controls for catalogue management, tier-based visibility, and wallet funding. Live in 2–3 weeks.

Both options give access to 10,000+ reward options across 100+ countries, including gift cards, travel (flights, hotels), lounge access (1,200+ airports), experiences, merchandise, charity, and mobile top-ups.

Both are SOC 2, ISO 27001, and GDPR-compliant.

Would a 20-minute technical walkthrough be useful for your product team?

Best,

{{SenderName}}

Email 4: Direct CTA — Pilot Proposal

Subject: Proposal: 90-day pilot for {{CompanyName}}’s loyalty programme

Hi {{FirstName}},

Based on our understanding of {{CompanyName}}’s loyalty programme and customer base, we’d like to propose a 90-day pilot:

Scope: Integrate Plum’s Rewards API (or deploy our white-labelled storefront) for a defined customer segment or loyalty tier.

What we provide: Full sandbox environment, dedicated onboarding engineer, compliance documentation for your infosec review, and a custom catalogue configured for your priority markets.

What we measure: Redemption rate uplift, user engagement on the rewards experience, point liability impact, and operational efficiency versus your current process.

Timeline: Sandbox access in 72 hours. Go-live in 2–3 weeks. 90-day measurement window.

There’s no long-term commitment required for the pilot. If the results speak for themselves, we discuss a commercial arrangement. If not, you’ve invested minimal engineering time.

Would this be worth discussing with your loyalty and product leadership?

Best,

{{SenderName}}

C. E-Wallets & Payment Apps — 84 Companies

Parameter	Details
Channels	LinkedIn InMail Sequence + ABM Email Sequence
Sales Cycle	Long (6–12 months)—similar compliance rigour to neo banks
Key Use Cases	Cashback-to-reward conversion, in-app reward storefront, payment milestone rewards, merchant engagement incentives
Target Personas	VP Product, Head of Consumer Engagement, Head of Partnerships, CISO
Core Pitch	Compliance-first rewards infrastructure that converts transaction data into reward experiences—without building an in-house catalogue.
Key Differentiators	SOC 2, GDPR, ISO 27001 + Perks API for zero-cost merchant offers + Mobile Top-Up API for emerging markets
Competitive Landscape	Paytm (in-house), DT One (top-ups only), Reloadly (limited categories)
Proof Points	PayTM (exploration), Dana (Indonesia), Vimopay

LinkedIn InMail Sequence — E-Wallets & Payment Apps

Duration: 4-touch sequence.

Target Personas: VP Product, Head of Consumer Engagement, Head of Partnerships.

Touch 1: Pain Point Entry

Subject: Turning payments into loyalty, without building a rewards catalogue

Hi {{FirstName}},

Most payment apps and e-wallets face the same challenge: users transact, earn cashback or points, and then... what? If the redemption experience is limited to a handful of options, engagement drops and liabilities grow.

At Xoxoday, we provide the rewards infrastructure layer that sits behind your payment app. One API integration gives your users access to 10,000+ reward options in 100+ countries, with gift cards, mobile top-ups, experiences, merchandise, and more. Or, we can deploy a fully white-labelled rewards storefront under your brand in 2–3 weeks.

For compliance-sensitive environments: we're SOC 2 Type II, GDPR, and ISO 27001 certified.

Would it be worth a brief chat to explore if this fits {{CompanyName}}'s engagement roadmap?

Best,

{{SenderName}}

Touch 2: Emerging Market Differentiator

Subject: Mobile top-ups: the #1 incentive for emerging market wallets

Hi {{FirstName}},

If {{CompanyName}} operates in markets across Southeast Asia, Africa, or Latin America, here's something we've seen work exceptionally well:

Mobile top-up as an instant reward. No codes, no friction, no fraud leakage. Users earn through payment activity and redeem as a direct mobile recharge, which is the most universally valued incentive in emerging markets.

Our Mobile Top-Up API sits alongside gift cards, experiences, merchandise, and our Perks API (always-on merchant discounts at zero cost to you). All through one integration.

This is a differentiator versus alternatives like DT One or Reloadly, which only offer single-category top-ups without the multi-reward flexibility.

Happy to show you a sandbox demo tailored to your key markets. Would 15 minutes next week work?

Best,

{{SenderName}}

Touch 3: Compliance + Architecture

Subject: Compliance considerationf for {{CompanyName}}'s infosec

Hi {{FirstName}},

I know compliance review is often the longest phase when payment companies evaluate new vendors. So I wanted to get ahead of it.

Our security overview spans SOC 2 Type II certification, GDPR compliance, ISO 27001 certification, data residency options, and our approach to fraud prevention (device fingerprinting, order limits, audit-grade reporting).

If your infosec or procurement team would like a dedicated compliance walkthrough, we're happy to schedule one directly with our security team.

Let me know a convenient time and date that works for your team.

Best,

{{SenderName}}

Touch 4: Final Touch — Sandbox Offer

Subject: Complimentary sandbox access, test the full catalogue

Hi {{FirstName}},

Last note from me for now. If rewards infrastructure is something {{CompanyName}} is evaluating this year, I'd like to offer complimentary sandbox access to Plum's API.

You can simulate the full reward lifecycle: browse the catalogue by country, place test orders, see fulfilment flows, and evaluate the storefront embed, all in a sandbox environment with no commitment.

If the timing isn't right now, completely understood. I'll circle back in Q3. But if it is on the roadmap, this is the fastest way for your product team to evaluate fit. Let me know either way.

Best,

{{SenderName}}

ABM Email Sequence — E-Wallets & Payment Apps

Duration: 4-email campaign.

Target Persona: broader product, engineering, and business teams at the same accounts.

Emphasises mobile-first, emerging-market use cases and compliance.

Email 1: Industry Context - Rewards in Payments

Subject: Payment apps that retain users 2x longer all do this one thing

Hi {{FirstName}},

Across the payments landscape, user acquisition costs keep rising. The apps winning on retention aren't just offering cashback. They're turning cashback into a rich rewards experience.

Instead of a simple statement credit, users choose from gift cards, experiences, dining, subscriptions, mobile top-ups, or even charity donations. The act of choosing a reward creates an emotional connection that a line item on a statement never can.

We provide the infrastructure that makes this possible. One API gives {{CompanyName}}'s users access to 10,000+ reward options in 100+ countries. Or, a white-labelled rewards storefront embedded in your app, live in 2–3 weeks.

Happy to connect for a short conversation if it's relevant.

Best,

{{SenderName}}

Email 2: Emerging Markets Angle

Subject: Why mobile top-ups outperform gift cards in SEA, Africa, and LATAM

Hi {{FirstName}},

If {{CompanyName}} serves users in emerging markets, this data point might be relevant:

In Southeast Asia, Africa, and Latin America, mobile top-ups consistently outperform gift cards as reward incentives. They're universally valued, instantly delivered, and carry zero fraud risk because there's no code to share or resell.

Our Mobile Top-Up API delivers instant recharges across hundreds of carriers in 100+ countries. It sits alongside our gift card, experience, merchandise, and Perks APIs so you can offer top-ups in emerging markets and gift cards in developed markets, all through one integration.

We also offer a Perks API that provides always-on merchant discounts to your users at zero cost. It's a powerful engagement layer for payment apps looking to drive daily app opens without spending a single reward point.

Would a quick technical overview be useful for your product team?

Best,

{{SenderName}}

Email 3: Compliance & Security

Subject: Sharing our compliance documentation for your team's review

Hi {{FirstName}},

Proactively sharing our compliance package for {{CompanyName}}'s infosec and procurement teams:

- SOC 2 Type II certification
- ISO 27001 certification
- GDPR compliance documentation
- Data residency options (multi-jurisdiction)

- Fraud prevention architecture (device fingerprinting, order limits, velocity checks)
- Audit-grade financial reconciliation and reporting

If a dedicated security walkthrough with our engineering team would be helpful, we're happy to arrange one.

We know compliance review is often the longest gate in vendor evaluation for payment companies so we want to get this in your hands early.

Best,

{{SenderName}}

Email 4: Pilot Proposal

Subject: Proposal: rewards pilot for a single market or user segment

Hi {{FirstName}},

If {{CompanyName}} is considering adding a rewards layer to your payment experience, here's a low-risk way to evaluate:

We'll set up a pilot for a single market or user segment. You choose the geography, user tier, or product line. We configure a custom catalogue, provide sandbox access in 72 hours, and support your team through integration and go-live in 2–3 weeks.

Pilot metrics: Redemption rates, user engagement on the rewards experience, repeat transaction frequency, and operational efficiency versus current processes.

No long-term commitment. If the pilot proves value, we discuss a broader rollout. If not, minimal engineering investment.

Would this be worth a conversation with your product leadership?

Best,

{{SenderName}}

3.2 Second Priority Segments

These segments have proven demand patterns from the existing customer base and strong product-market fit. Messaging centres on Xoxoday's unique value proposition and competitive differentiation versus gift-card-only alternatives.

D. Employee R&R Platforms — 123 Companies

Parameter	Details
Channels	LinkedIn InMail Sequence + ABM Email Sequence
Sales Cycle	Medium (3–6 months)
Key Use Cases	Rewards catalogue for R&R programmes, milestone/anniversary gifting, peer-to-peer recognition redemption, employee perks & benefits store
Target Personas	Head of Product, VP Engineering, Partnerships Lead, CEO/CTO (for SMBs)
Core Pitch	Your platform handles recognition. We handle reward fulfilment. One API gives your users 10,000+ rewards in 100+ countries.
Key Differentiators	Multi-category catalogue (not just gift cards), white-labelled storefront, pre-built integrations (Salesforce, DarwinBox, SAP SF), Swag catalogue
Competitive Landscape	Tremendous (gift-cards only), Tango Card (US-centric), Rybbon (email-focused)
Proof Points	Alcor (B2B reseller), RecogNation, multiple existing channel partners

LinkedIn InMail Sequence — Employee R&R Platforms

Duration: 4-touch sequence.

Target Persona: Head of Product, VP Engineering, Partnerships Lead.

Touch 1: *Competitive Disruption Hook*

Subject: Your R&R platform deserves more than a gift card catalogue

Hi {{FirstName}},

I've been looking at {{CompanyName}}'s recognition platform. Great product!

Quick question: what powers your reward redemption experience today?

Most R&R platforms we speak with rely on gift-card-only providers like Tremendous or Tango Card. That works, but it limits the employee experience to a single reward category. Employees want choice, from experiences to merchandise, charity donations, branded swag, dining, subscriptions, and yes, gift cards too.

Xoxoday Plum provides a single API that gives your users access to all of the above with 10,000+ options in 100+ countries. Or, if your clients prefer a visual experience, we offer a fully white-labelled rewards storefront that goes live in 2–3 weeks.

We also have pre-built integrations with Salesforce, DarwinBox, and SAP SuccessFactors, so your enterprise clients can connect rewards to their existing HR stack.

Would it be worth 15 minutes to explore the fit?

Best,

{{SenderName}}

Touch 2: Architecture + Speed-to-Value

Subject: One API. Six reward categories. Live in 3 weeks.

Hi {{FirstName}},

Here's what a typical integration looks like for R&R platforms working with Plum:

Week 1: Sandbox access and API walkthrough with your dev team.

Week 2: Integration build and catalogue configuration (choose categories, set country filters, define point-to-currency ratios).

Week 3: Testing, go-live, and first reward redemptions.

Through that single integration, your platform gets access to: gift cards, experiences, merchandise, branded swag, charity donations, and always-on perks/discounts.

Your clients see all of this under your brand. White-labelled communications, branded point currency (e.g., "YourCoins"), and admin controls for catalogue and budget management.

Let me know if a quick walkthrough would be helpful for your product team.

Best,

{{SenderName}}

Touch 3: Competitive Comparison

Subject: Plum vs. Tremendous vs. Tango: what your clients are asking for

Hi {{FirstName}},

We're increasingly hearing from R&R platforms that their enterprise clients are pushing for richer reward options. Here's how we compare:

Tremendous: Developer-friendly, but restricted to gift cards and payouts. No experiences, no merchandise, no swag, no charity. US-heavy catalogue.

Tango Card: Strong in North America, but limited global coverage. Gift-card-only.

Xoxoday Plum: Gift cards + experiences + merchandise + swag + charity + lounge access + mobile top-ups + perks. 100+ countries. White-labelled storefront option. Pre-built HRIS integrations.

Happy to have a quick chat if the above resonates with you. Just reply and I'll schedule a meeting at a time and date convenient for you.

Best,

{{SenderName}}

Touch 4: Final Touch — Partnership Framing

Subject: Exploring a rewards partnership with {{CompanyName}}

Hi {{FirstName}},

I'll keep this brief. We work with R&R platforms as a rewards infrastructure partner, not a competitor. You own the recognition experience. We power what happens when employees redeem.

If expanding your reward catalogue or adding global coverage is on {{CompanyName}}'s 2026 roadmap, I'd love to explore a partnership conversation.

No pressure, no hard sell. Just a conversation about whether our infrastructure can help your platform deliver a better employee experience.

Happy to work around your schedule.

Best,

{{SenderName}}

ABM Email Sequence — Employee R&R Platforms

Duration: 4-email campaign.

Target Persona: Product, Engineering, and Business Development teams.

Designed to educate on Plum's multi-category advantage and pre-built HRIS integrations.

Email 1: Market Shift: Beyond Gift Cards

Subject: The R&R platforms gaining market share have moved beyond gift cards

Hi {{FirstName}},

A trend we're tracking in the employee recognition space: the platforms winning enterprise deals are the ones offering reward choice beyond gift cards.

When an employee is recognised by a peer and can choose between a spa experience, a charity donation, branded company swag, a restaurant voucher, or a gift card, the emotional impact of that recognition moment multiplies. It becomes personal.

The platforms still offering gift-card-only redemption are increasingly losing out in competitive evaluations.

We power the multi-category reward experience for R&R platforms. One API integration gives your users access to gift cards, experiences, merchandise, swag, charity, mobile top-ups, and always-on perks, in 100+ countries.

If this has piqued your interest or resonates with your priorities, let's have a no pressure chat.

Best,

{{SenderName}}

Email 2: Integration Advantage: Pre-Built Connectors

Subject: Pre-integrated with Salesforce, DarwinBox, and SAP SuccessFactors

Hi {{FirstName}},

One thing that accelerates adoption for R&R platforms working with us: pre-built integrations with the HRIS systems your enterprise clients already use.

We have live integrations with Salesforce, DarwinBox, SAP SuccessFactors, Akrivia, Invite Referrals, and several others. This means your enterprise clients can connect their HR stack to a global rewards catalogue without custom development.

For your platform, the integration is a single API. For your clients, it's a seamless extension of their existing HR workflows.

Would a technical walkthrough be useful for your engineering team?

Best,

{{SenderName}}

Email 3: Competitive Differentiation

Subject: Side-by-side: Plum vs. Tremendous vs. Tango Card

Hi {{FirstName}},

If your team is evaluating rewards infrastructure providers, here's a quick comparison:

Tremendous: Developer-friendly API. But restricted to gift cards and payouts. No experiences, merchandise, swag, lounge access, or charity. Primarily US catalogue.

Tango Card: Solid in North America. Gift-card-only. Limited global coverage. No white-labelled storefront option.

Xoxoday Plum: Gift cards + experiences + merchandise + branded swag + charity + lounge access + mobile top-ups + always-on perks. 100+ countries. White-labelled storefront (live in 2–3 weeks). Pre-built HRIS integrations. Admin dashboard for catalogue and budget management.

If it's useful for your product evaluation, I can schedule a quick demo of our platform.

Best,

{{SenderName}}

Email 4: Partnership CTA

Subject: Let's explore: {{CompanyName}} + Xoxoday Plum as rewards infrastructure

Hi {{FirstName}},

Last email in this series. I wanted to frame this clearly.

We're not an R&R platform. We're the rewards infrastructure that R&R platforms plug into. You handle recognition. We handle fulfilment, the catalogue, ordering, delivery, reconciliation, and global compliance.

If expanding reward options or adding international coverage is anywhere on {{CompanyName}}'s roadmap, I'd welcome a 20-minute conversation about a partnership.

We'll provide sandbox access, a technical walkthrough, and a custom catalogue proposal for your key markets. No commitment required.

Best,

{{SenderName}}

E. Employee Fringe Benefits Platforms — 29 Companies

Parameter	Details
Channels	LinkedIn InMail Sequence + ABM Email Sequence
Sales Cycle	Medium (3–6 months)
Key Use Cases	Benefits marketplace (lifestyle spending accounts), wellness stipends, learning allowances, remote work perks
Target Personas	Head of Product, VP Partnerships, CTO
Core Pitch	Power your benefits marketplace with global rewards infrastructure. 10,000+ options. White-labelled. Global coverage.
Key Differentiators	Perks API (zero-cost offers), Storefront embed for rapid deployment, global coverage for distributed teams
Proof Points	Viwell (H&W Perks API), Ekincare (in implementation)

LinkedIn InMail Sequence — Fringe Benefits

Duration: 3-touch sequence.

Target Personas: Head of Product, VP Partnerships, CTO.

Touch 1: *Benefits Marketplace Entry*

Subject: Powering lifestyle spending accounts with a global rewards catalogue

Hi {{FirstName}},

As flexible benefits and lifestyle spending accounts (LSAs) become the norm, the challenge for platforms like {{CompanyName}} is sourcing a diverse, global rewards catalogue that actually matches what employees want to spend on.

We provide exactly that. An API-first rewards infrastructure with 10,000+ options across health & wellness, dining, education, experiences, merchandise, subscriptions, and more, in 100+ countries.

Plus, our Perks API gives your users access to always-on merchant discounts at zero cost to the employer. It's a benefit that costs nothing but delivers meaningful value.

Would it be worth a brief conversation to see if Plum could power {{CompanyName}}'s benefits marketplace?

Best,

{{SenderName}}

Touch 2: *Zero-Cost Engagement Layer*

Subject: A benefit that costs nothing: always-on perks for your users

Hi {{FirstName}},

One feature our benefits platform partners love: the Perks API.

It's a catalogue of always-on merchant discounts and deals that your users can access without spending a single point or any employer budget. Think: 15% off a gym membership, discounted dining, savings on subscriptions, curated by country and category.

For benefits platforms, this is a powerful base layer. Even before an employee has accumulated enough LSA balance to redeem, they're getting value from the platform. It drives daily engagement and reinforces the habit of using your app.

This sits alongside our full rewards catalogue (gift cards, experiences, merchandise, etc.), all through one integration.

Would a quick demo be useful?

Best,

{{SenderName}}

Touch 3: Partnership Proposal

Subject: Infrastructure partnership: {{CompanyName}} + Xoxoday Plum

Hi {{FirstName}},

Final note from me. If expanding your benefits catalogue or adding global reward options is on the roadmap, I'd love to discuss a partnership.

Our model is simple: you own the benefits experience. We provide the rewards infrastructure. White-labelled, API-first, and live in 2–3 weeks.

Current partners in the employee benefits space include wellness apps (Vivell, Ekincare) and HR platforms using our pre-built integrations.

Happy to set up a no-commitment technical walkthrough whenever timing suits.

Best,

{{SenderName}}

ABM Email Sequence — Fringe Benefits Platforms

Duration: 4-email campaign.

Target Persona: Product, Partnerships, and Engineering stakeholders.

Focuses on the Perks API differentiator and LSA use case.

Email 1: Industry Trend: Flexible Benefits

Subject: The future of employee benefits is a marketplace, not a menu

Hi {{FirstName}},

Fixed benefits packages are losing relevance. Employees want choice. A wellness stipend one month, a learning course the next, a dining experience the month after. The platforms enabling this flexibility are winning.

But building a diverse, global benefits catalogue is expensive and operationally complex. That's where we come in.

Xoxoday Plum provides the rewards infrastructure layer for benefits platforms. One API gives your users access to 10,000+ options across health & wellness, dining, education, experiences, merchandise, subscriptions, and more, in 100+ countries. All white-labelled under your brand.

If you are open to a brief chat on how flexible benefits platforms using rewards infrastructure are drive engagement, reply to this email.

Best,

{{SenderName}}

Email 2: Perks API Deep Dive

Subject: Zero-cost benefits that drive daily app engagement

Hi {{FirstName}},

Here's a feature that fringe benefits platforms find particularly powerful: our Perks API.

It's a curated catalogue of always-on merchant discounts, from gym memberships to dining offers, subscription savings, retail deals, and more, that your users access at zero cost to the employer.

For benefits platforms, this creates a unique dynamic: employees get value from Day 1, even before they've accumulated any spending balance. They open the app to check perks, which builds the habit of engagement with your platform.

The Perks API sits alongside our full rewards catalogue (gift cards, experiences, merchandise, etc.), so you get both a zero-cost engagement layer and a funded rewards marketplace through a single integration.

Would a technical demo be useful?

Best,

{{SenderName}}

Email 3: How It Works - Architecture

Subject: Deploy a white-labelled benefits marketplace in 2–3 weeks

Hi {{FirstName}},

For your product and engineering team at {{CompanyName}}, we offer two integration paths for benefits platforms:

API Integration: Full control over the benefits UI. Your team builds the experience; our APIs handle catalogue, ordering, fulfilment, and reconciliation. Best for platforms with custom UX requirements.

White-Labelled Storefront: A fully branded benefits marketplace embedded in your app or portal. Admin controls for catalogue curation, category visibility, budget management, and user tiering. Live in 2–3 weeks.

Both include the Perks API (zero-cost offers), the full rewards catalogue (10,000+ options in 100+ countries), multilingual support, and multi-currency handling.

If this is a priority for {{CompanyName}}, reply to this email with a time and date that work for a brief conversation.

Best,

{{SenderName}}

Email 4: Partnership CTA

Subject: Let's explore: rewards infrastructure for {{CompanyName}}'s benefits platform

Hi {{FirstName}},

Last note in this series. If enriching your benefits catalogue or adding global coverage is on {{CompanyName}}'s 2026 roadmap, I'd welcome a conversation.

We'll provide sandbox access, a technical walkthrough, and a custom catalogue proposal configured for your key markets and benefits categories. No commitment required.

Our model is infrastructure partnership: you own the benefits experience, we power the rewards behind it.

Best,

{{SenderName}}

F. SMB Market Research Agencies — 602 Companies

Parameter	Details
Channels	LinkedIn InMail Sequence + ABM Email Sequence (segmented by industry they serve)
Sales Cycle	Short to Medium (2–4 months)
Key Use Cases	Survey panel incentives, respondent rewards, research participant compensation, NPS/CSAT programme rewards
Target Personas	Panel Manager/Head, Product Manager/Head, Insights Manager, Operations Head, Research Head
Core Pitch	Instant, global survey incentives via API. Replace manual gift card procurement with automated, multi-country reward delivery.
Key Differentiators	Mobile Top-Up API (emerging market panels), multi-currency auto-conversion, instant delivery, bulk order APIs
Competitive Landscape	Rybbon (primary competitor), Tremendous (growing)
Proof Points	Nielsen (pipeline), Growman Research, Martlenz Research, Hubsite Survey, Jooble

LinkedIn InMail Sequence — Market Research Agencies

Duration: 4-touch sequence over 6 weeks.

Target Personas: Panel Manager, Insights Head, Operations Head.

Touch 1: Pain Point: Manual Procurement

Subject: Still procuring survey incentives manually? There's a faster way.

Hi {{FirstName}},

Running research panels across multiple countries usually means juggling different gift card vendors, managing currency conversions manually, and dealing with delayed fulfilment that hurts response rates.

We work with market research agencies to automate all of that. One API integration gives you instant incentive delivery to respondents in 100+ countries, across gift cards, mobile top-ups, experiences, and more.

No manual procurement. No currency headaches. No delayed gratification for your respondents.

Agencies like Growman Research and Martlenz are already using this to improve panel completion rates and reduce operational overhead.

Would a quick 30-minute demo be useful?

Best,

{{SenderName}}

Touch 2: Emerging Market Panels

Subject: Mobile top-ups: the #1 incentive for emerging market panels

Hi {{FirstName}},

If {{CompanyName}} runs panels in markets across Southeast Asia, Africa, or Latin America, here's a data point you might find interesting.

Mobile top-ups consistently outperform gift cards as survey incentives in emerging markets. They're universally valued, instantly delivered, and have zero fraud leakage because there's no code to share or resell.

Our Mobile Top-Up API lets you deliver instant recharges to respondents as soon as they complete a survey. It sits alongside our gift card API, so you can offer top-ups in emerging markets and gift cards in developed markets, all through one integration.

For your operations team, this means one vendor, one API, one reconciliation report, regardless of how many countries your panels span.

Happy to show you how it works in a quick sandbox session.

Best,

{{SenderName}}

Touch 3: ROI & Efficiency Angle

Subject: Cut panel incentive costs by 30%. Here's how.

Hi {{FirstName}},

Three ways MR agencies are reducing incentive costs with Plum:

1. Bulk order APIs: place hundreds of reward orders programmatically, eliminating manual procurement time and error.
2. Multi-currency auto-conversion: no more managing exchange rates or paying premiums on cross-border gift card purchases.
3. Mobile top-ups for emerging markets: lower per-incentive cost versus gift cards, with higher respondent satisfaction.

One agency we work with reduced their per-panel incentive administration time by 60% and their total incentive spend by approximately 30% after switching from manual procurement to our API.

If operational efficiency is a priority for {{CompanyName}} this year, I'd love to walk you through the numbers.

Best,

{{SenderName}}

Touch 4: Final Touch — Free Trial

Subject: Test Plum free on your next panel. No commitment.

Hi {{FirstName}},

Here's a no-risk offer: use Plum on your next survey panel at no commitment.

We'll set up a sandbox account, walk your tech team through the API (typically takes 1–2 days to integrate), and let you run a pilot panel with real incentives.

If it works, we'll discuss a commercial arrangement. If it doesn't, no hard feelings. You've lost nothing but an hour of setup time.

Interested?

Best,

{{SenderName}}

ABM Email Sequence — Market Research Agencies

Duration: 4-email campaign.

Segment by industry the agency serves (healthcare MR, consumer MR, financial MR, tech MR) and customise subject lines accordingly.

Email 1: *Operations Pain — Scale Problem*

Subject: Running panels in 10+ countries? One API replaces 10 vendors.

Hi {{FirstName}},

If {{CompanyName}} runs research panels across multiple countries, you're probably familiar with this: different gift card vendors for different markets, manual currency conversions, spreadsheets tracking fulfilment status, and respondents waiting days for their incentive.

We replace all of that with a single API. One integration gives you instant incentive delivery of gift cards, mobile top-ups, experiences, and more, in 100+ countries, with automatic currency conversion and real-time fulfilment tracking.

Your operations team gets one vendor, one API, one reconciliation report. Your respondents get instant rewards in their local currency.

Agencies like Growman Research and Martlenz are already using this to run multi-country panels more efficiently.

Would a 20-minute product overview be useful?

Best,

{{SenderName}}

Email 2: *Panel Quality — Respondent Experience*

Subject: Want better panel completion rates? Reward respondents instantly.

Hi {{FirstName}},

Here's a pattern we see repeatedly: MR agencies that switch from delayed incentive delivery to instant rewards see meaningful improvements in panel completion rates.

When a respondent finishes a 20-minute survey and immediately receives a mobile top-up, a gift card, or a voucher for their favourite restaurant, they're far more likely to complete the next survey you send them.

Delayed fulfilment (even by a few days) creates friction. Respondents lose trust. Panel dropout rates climb.

Our API delivers rewards instantly upon survey completion. Your system calls our API, the respondent receives their incentive within seconds. Gift cards, mobile top-ups, and experiences localised to their country.

If this has piqued your interest, reply to this email for a brief virtual conversation over coffee.

Best,

{{SenderName}}

Email 3: *Cost Savings — Operational Efficiency*

Subject: How MR agencies are cutting incentive costs by 30%

Hi {{FirstName}},

Three operational improvements MR agencies gain with Plum:

1. Bulk Order APIs: Place hundreds of incentive orders programmatically. No manual gift card procurement, no spreadsheets, no email chains with vendors.

2. Multi-Currency Auto-Conversion: Run panels in 10 countries? Our API handles currency conversion automatically. No exchange-rate premiums, no manual calculations.

3. Mobile Top-Ups for Emerging Markets: In SEA, Africa, and LATAM, mobile top-ups cost less per incentive than gift cards and have higher respondent satisfaction. Zero fraud risk because there's no code to resell.

One of our agency clients reduced incentive administration time by 60% and total incentive spend by approximately 30% within their first quarter.

Would it be worth a brief conversation about {{CompanyName}}'s current incentive operations?

Best,

{{SenderName}}

Email 4: Free Pilot CTA

Subject: Run your next panel on Plum. Free pilot. Zero commitment.

Hi {{FirstName}},

Here's our offer: run your next survey panel using Plum's API at no cost or commitment.

What we provide:

- Sandbox access within 72 hours
- Technical walkthrough and integration support (3-day integration)
- Custom catalogue configured for your panel's primary markets
- Real-time fulfilment dashboard and reconciliation reporting

What you measure:

- Panel completion rates vs. your current process
- Respondent satisfaction
- Operational time saved
- Per-incentive cost comparison

If the results justify it, we discuss commercial terms. If not, you've invested minimal time and learned something about your incentive operations.

Interested? Just reply and we'll get started.

Best,

{{SenderName}}

4. Messaging Framework by Segment

All messaging anchors on one core narrative: Plum is the world's burn engine for any earn engine. The following framework provides segment-specific variations.

Segment	Primary Message	Compliance Hook	Proof Point
Health & Wellness	Reward every step — turn health goals into tangible rewards with 10,000+ options in 100+ countries	Standard API security + fraud prevention	Viwell, Curefit
Neo Banking	Your customers earn through banking. We power the redemption — compliant, global, API-first	SOC 2 Type II, GDPR, ISO 27001, data residency	HDB, Fino, Suryoday
E-Wallets	From payments to rewards — one API to delight your users	SOC 2 Type II, GDPR, ISO 27001	PayTM, Dana, Vimopay
Employee R&R	Don't build a catalogue. Plug into ours — gift cards, experiences, swag, charity, and more	Enterprise SSO + role-based access	Alcor, RecogNation
Fringe Benefits	Power your benefits marketplace with global rewards infrastructure	HRIS integration-ready, SOC 2	Viwell, Ekincare
Market Research	Instant, global survey incentives — replace manual procurement with automated delivery	Panel data privacy + GDPR	Growman, Martlenz, Nielsen

Key Positioning Principles

1. Open-Loop Only: Plum supports open-loop loyalty programmes. Never position as a closed-loop solution. The pitch is always “your earn engine + our burn engine.”
2. Burn Engine Narrative: Position Plum as infrastructure, not a destination. The customer's platform is where users engage; Plum powers what happens after they earn.
3. Compliance Leads for BFSI: For banking and payments segments, compliance messaging (SOC 2, GDPR, ISO 27001) must be above the fold in all creative.
4. Speed-to-Value: Emphasise 2–3 week go-live for storefront, and rapid sandbox access for API integration.
5. Multi-Category Advantage: Unlike competitors who are gift-card-only, Plum offers gift cards + experiences + lounge access + merchandise + charity + mobile top-ups + perks — all in one integration.

5. Content & Asset Roadmap

Asset	Segment	Format	Target Quarter	Purpose
White Paper: Open-Loop Loyalty for Digital Banks	Neo Banking, E-Wallets	PDF / Gated	Q1	Thought leadership, top-of-funnel
