

Xoxoday Products - Empuls, Loyalife, Plum

Behind the names of each product - take it from website

Roadmaps - put jira links

Reward programs

- Closed loop -
 - The rewards earned and burned in specific brand, company product, or a small set of options.
 - E.g. retail, airline, hotels
 - Generally done for repeat purchase, better controls and data insights
 - Generally no GMV revenue
- Open loop
 - Rewards burn is open to anywhere in the world
 - maximum flexibility and choice, works across any industry & geo
 - E.g. survey rewards, baking loyalty programs, fintech
 - Lower GMV revenue as catalog is open to cash like options
- Semi-closed
 - Rewards earn from one place, burn can be multiple selective places but not everywhere
 - E.g. coalition programs, channel incentives
 - GMV margins is better as catalog is restricted

Details	Plum	Empuls	Loyalife
ICP	Any, multiple use cases	More than 200 employees	Mid and enterprise companies only

Positioning			
Key decision makers			
Key industries			
Client problem statement & ROI			
Revenue model	GMV margin, Expiry, SaaS, AMC	GMV margin, Expiry, SaaS, AMC	GMV margin, SaaS, AMC, Change requests

Empuls: The AI-powered employee engagement platform

1. What is Empuls?

Empuls is an AI-powered platform designed to help companies meaningfully engage employees across the entire lifecycle – from onboarding to exit. It caters to HR teams, managers, and leadership looking to boost engagement, build a culture of appreciation, streamline communication, and provide personalized employee experiences at scale.

Key features

- Rewards and recognition (R&R) automation
- Sales incentives and commissions management
- Employee gifting and service award/tenure awards management
- Lifecycle and pulse surveys with AI insights
- Perks, employee discounts, fringe benefits, tax benefits management
- Social intranet, games, quizzes
- Wellness & fitness challenges
- Integration with collaboration and HRMS tools
- Global rewards marketplace across 100+ countries
- AI co-pilot, AI-driven engagement nudges and predictive analytics

=====

 - Okr, performance, 360 degree - Not in Empuls
 - ESG - Not in Empuls
 - Fun, social connection, gamification - Empuls is medium

=====

2. Why Empuls? What problems does it solve?

How do you keep employees motivated, recognized, connected, rewarded and aligned with performance — at scale? Since Empuls sits at the intersection of employee engagement, recognition, rewards, benefits, surveys and internal communication, the problems it solves are different for each persona inside the organization. Empuls solves this by bringing together in a single platform:

- Recognition
- Rewards
- Incentives & commissions
- Benefits
- Employee engagement

- Feedback & surveys
- Milestone celebrations
- Social intranet
- Gamification & wellness
- AI insights
- Workplace integrations

Below is a structured breakdown by persona

1. HR Leaders / People & Culture Teams - HR teams are responsible for engagement, culture, benefits and employee experience, but most programs are fragmented across tools. Problems HR Faces

1. Recognition Culture Does Not Scale

- Appreciation depends on individual managers
- Recognition is inconsistent across teams

2. Employee Milestones Are Missed

- Birthdays, work anniversaries and achievements often go unnoticed
- HR teams cannot track milestones across large organizations

3. Manual Employee Programs

- Rewards, gifting, recognition and celebrations require manual effort

4. Lack of Real-Time Employee Feedback

- Annual surveys are outdated
- HR cannot detect disengagement early

5. Engagement Programs Are Hard to Run

- Quizzes, challenges and campaigns require manual coordination

6. Fragmented Employee Benefits

- Managing fringe benefits, tax benefits and perks is complex

7. Employees Use Too Many Platforms

- Engagement tools are separate from daily work tools

How Empuls Solves This

- Peer and manager recognition programs
- Automatic milestone recognition (birthdays, anniversaries, achievements)
- Rewards marketplace across global brands
- Employee gifting and service awards
- Pulse surveys and sentiment analysis
- Engagement tools (quizzes, polls, challenges)
- Benefits and tax savings management
- Integrations with MS Teams, Slack and Google Workspace
- AI copilot for HR insights and automation

2. Leadership / CXOs / Founders - Leadership focuses on productivity, retention, culture and alignment with company goals. Problems Leadership Faces

1. Poor Visibility into Employee Morale

- Leaders rely on indirect signals

2. Culture Dilution as Companies Scale

- Values get lost as organizations grow

3. Weak Motivation Beyond Salary

- Salary alone cannot drive discretionary effort

4. Lack of Alignment Across Teams

- Employees may not feel connected to company mission

5. Hard to Build Community in Hybrid Work

- Distributed teams struggle with belonging

How Empuls Solves This

- Real-time engagement insights
- Recognition tied to company values
- Culture reinforcement through social recognition

- Milestone celebrations across the organization
- Social intranet and communities
- AI-powered engagement insights

3. Sales Leaders / Revenue Leaders - With Compass integrated, Empuls now solves critical sales performance and motivation problems. Problems Sales Leaders Face

1. Sales Incentives Are Hard to Manage

- Incentive plans tracked manually
- Errors in payout calculations

2. Delayed Incentive Payouts Reduce Motivation

- Long payout cycles reduce momentum

3. Lack of Performance Visibility

- Sales reps cannot see their progress

4. No Gamification of Sales

- Sales competitions and campaigns are informal

5. Hard to Celebrate Wins

- Deal wins are not recognized company-wide

How Empuls Solves This

- Automated sales incentives and commissions
- Real-time performance dashboards
- Leaderboards and sales contests
- Instant rewards for performance milestones
- Recognition of deal wins and achievements
- Gamification of revenue performance

4. Managers / Team Leaders - Managers are responsible for motivation, team culture and performance, but often lack the right tools. Problems Managers Face

1. Hard to Recognize Team Members Frequently

- Appreciation becomes occasional

2. Hybrid Teams Feel Disconnected

- Managers struggle to build team bonding

3. No Easy Way to Run Engagement Activities

- Team activities require manual effort

4. Lack of Visibility into Employee Sentiment

- Managers learn about issues too late

How Empuls Solves This

- Instant recognition and rewards
- Team celebrations and milestone recognition
- Engagement activities like quizzes and challenges
- Polls and feedback tools
- Recognition integrated into daily collaboration tools

5. Employees - Employees want recognition, belonging, motivation and benefits flexibility.

Problems Employees Face

1. Feeling Undervalued

- Contributions go unnoticed

2. Lack of Appreciation

- Recognition happens rarely

3. Work Feels Transactional

- Limited social connection at work

4. Milestones Are Not Celebrated

- Birthdays, anniversaries and achievements go unnoticed

5. Rewards and Benefits Are Rigid

- Employees prefer flexible rewards and perks

6. Sales incentives are not on time, are full of errors and not clear

How Empuls Solves This

- Peer recognition and appreciation
- Flexible reward catalog
- Milestone celebrations
- Social workplace communities
- Employee gifting and benefits
- Wellness challenges and engagement activities
- Sales incentives on time and with transparency

6. Finance Teams - Finance teams focus on budget control, ROI and compliance. Problems Finance Faces

1. Fragmented Spending on Rewards

- Different teams run different reward programs

2. Lack of ROI Visibility

- Hard to measure impact of engagement programs

3. Vendor Complexity

- Multiple vendors for rewards and gifting

4. Taxation and Compliance Issues

- Reward and benefit taxation is complex

5. Management of sales incentives is complicated

How Empuls Solves This

- Centralized reward and incentive budgets
- Consolidated vendor ecosystem
- Analytics and reporting

- Tax compliant rewards and benefits management

7. Internal Communications Teams

Problems

- Employees ignore internal emails
- Communication is fragmented
- Hard to drive engagement with internal initiatives

How Empuls Solves This

- Social intranet
- Interactive communication
- Polls, quizzes and engagement campaigns
- Recognition-driven participation

A Key Differentiator Empuls Solves

One of the biggest challenges today: Employee engagement tools live outside the flow of work. Empuls solves this through deep integrations so that one can take action from the flow of work.

Empuls integrates with:

- Microsoft Teams
- Slack
- Google Workspace
- HRMS platforms
- Work tools

The Big Narrative - >

Empuls helps organizations build a workplace where employees are:

Recognized for contributions

Rewarded for performance

Motivated through incentives

Celebrated through milestones

Connected through community

Heard through feedback

Supported through benefits

=====

3. Modules & Features in Empuls

One can choose the modules in Empuls. Clients can choose one or more modules as per their requirements.

1. Rewards & recognition

Empuls empowers companies to build a culture of appreciation by enabling both top-down and peer-to-peer recognition.

- **Spot, Approval, Jury-based** – automate and simplify complex R&R workflows.
- **Democratized awards** – employees can claim or nominate themselves based on achievements or project outcomes.
- **Milestone programs** – automate recognition for service anniversaries and other key moments.
- **Core value badges** – reinforce culture by tying recognition to organizational values.
- **COLI (Cost of Living Index)** - adjust rewards equitably for a global workforce.
- **Automated reward cycles** with budget management, advanced governance rules, reward abuse reports (quid pro quo), and structured notification campaigns.
- **Leaderboards for gamified engagement**, particularly suited for blue-collar workforce initiatives.
- **Customizable challenges** – design challenges across sales, learning, wellness, productivity, team building, CSR and more. Encourage participation and reward employees for achieving milestones.

2. Sales incentives & commissions

Automate and disburse sales incentives & commissions at scale

- **Incentive Program Design** - Custom incentive plan builder with multiple incentive structures (territory, quota, roles, SPIFFs, contests, commissions)

- **Commission Management** - Commission plan management, Commission calculations, Incentive payouts. Commission statements
- **Automated commission calculations** - Incentive rule engine, Multi-layer incentive calculations, Real-time incentive tracking, Error-free payouts
- **Sales Performance Tracking** - Individual performance dashboards, Progress toward incentive milestones
- **Gamification** - Sales contests and campaigns, leaderboards, badges, rankings
- **SPIFFs and Sales Campaign Management** - SPIFF programs, Sales contests, Seasonal incentive campaigns, Product launch incentives
- **Integrations with CRM and Sales Tools** - CRM integrations (like Salesforce, HubSpot), Data sync for deals and revenue, Automated incentive calculations
- **Analytics and Insights** - Incentive ROI analytics, Sales performance insights, Incentive program optimization

3. Employee gifting

Automated and customized gifting workflows for every use case;

- **Add automation to enhance programs** so no milestone, service anniversary, birthdays or meaningful moment is missed - boosting belonging and building a culture of recognition.
- **Integrate with your HRIS, automate onboarding, birthdays and anniversaries**, and rest easy – every moment is covered.
- **Celebrate new hires** with automated and custom recognition that welcomes, engages, and reinforces culture from day one.
- **Bring festive fun into any employee gifting strategy** with personalized programs for all holidays big and small, with minimal manual effort.
- **From weddings and new homes to furry friends and diplomas**, easily recognize every personal milestone.

Swag support and Year Books;

- **Swag Support** – bulk orders for custom-branded merchandise with fully managed logistics.
- **Year Books** enable teammates to contribute heartfelt notes and photos, creating a one-of-a-kind digital or printed celebration.

3. Surveys & feedback

Run a continuous listening strategy with science-backed surveys and AI analytics.

- **Survey Types:** eNPS, lifecycle, pulse, 360° feedback.
- **Sentiment Analysis:** actionable sentiment insights.
- **Customization:** Modify templates or create from scratch using an extensive question bank.
- **Mood-o-Meter:** Track the emotional tone of your employees in real time.
- **AI bot for surveys:** *Real time listening & insights (Launch June 2026)**

4. Employee benefits

Empuls simplifies benefits management while maximizing tax savings and flexibility;

- **Multi-benefit prepaid card** – tax-saving on fuel, telecom, books, meals, etc.
- **Fringe benefits** – flexible Lifestyle Spending Accounts (LSAs) for fitness, wellness, travel, upskilling, family care etc.
- **Early salary access** – financial wellness for unplanned expenses through pay day loans
- **Device leasing benefits** – lease the best-in-class devices for your workforce at zero running cost.
- **Perks & employee discount programs** - get best in class offers on travel, food, utilities, gadgets, services etc

5. Wellness & fitness

- **Fitness Challenges:** Step, walking, running, cycling and other activity-based challenges for individuals or teams.
- **Integration with Fitness Apps & Wearables:** Sync activity data automatically from popular wellness platforms and devices.
- **Gamification:** Leaderboards, badges, milestones and team competitions to make wellness programs engaging.
- **Wellness Campaigns:** HR can run themed programs like “10K Steps Challenge”, “30-Day Fitness Challenge”, etc.
- **Rewards for Participation:** Employees earn points, gift cards or rewards for completing challenges.
- **Social Engagement:** Employees share progress, celebrate achievements and motivate peers on the Empuls social feed.
- **Participation Insights:** HR can track engagement and participation in wellness initiatives.

- **Doctor Consultations & Health Checkups:** Access to online doctor consultations and preventive health checkups through wellness partners.
- **Gym & Fitness Memberships:** Subsidized or discounted gym memberships and fitness programs.
- **Holistic Wellness Programs:** Access to services like mental wellness, nutrition guidance, and health coaching through partners.

6. Social intranet

Foster transparency, connection, and community in hybrid workplaces;

- **Personalized content feed** with posts, videos, polls, and celebrations.
- **Rich text media editor** - support for text editing, that includes advanced styling options like bold, italic, underline, bullet points, and indentation.
- **Wishboards and Yearbooks** for milestones.
- **Spotlight** – create and pin on feed org-wide announcements.
- “Ask Me Anything” formats, townhalls, and organizational charts
- **Community groups** based on location, interests, hobbies, projects, etc.
- **Employee directory** – find information about peers and understand team structures to connect with the right person.
- **Home page editor** – fully customizable homepage with quick links and widgets.
- **LinkedIn integration** – share recognitions on LinkedIn feed with your network.

=====

Technology innovations: Empuls agentic AI and capabilities

Em, the agentic AI in Empuls, is your proactive engagement assistant.

- **AI skill mapping** – extracts employee skills from recognition messages to build skill profiles.
- **Recognition coach** – identifies who hasn’t been recognized recently or those who should be recognised based on smart insights.
- **Award automation** – auto-generates personalized awards with visuals.
- **Predictive analytics** – forecasts attrition risk and program impact.
- **AI-driven survey insights** – auto-summarizes responses and recommends actions.

- **Content moderation** – flags inappropriate posts to maintain workplace decorum.

=====

Reward store

A global catalog designed for diverse preferences:

- **10M+ reward options** in 100+ countries.
- **Gift cards** (8,000+ brands), **merchandise** (300K+ SKUs), **experiences, swag** (custom-branded products), **flights, lounge, hotels**, and **charity**.
- **Integrated with Amazon for Business** with FBA (Fulfilled by Amazon) logistics
- **Supports in-house catalog** – especially used in blue-collar workforce industries to drive cash-based rewards.

=====

Reporting & insights

Make data-driven decisions with Empuls' intuitive reporting dashboards:

- **Budget, Redemption, Awards & Nominations.**
- **Manager impact score** (how well is the manager and their team adopting to your rewards program), **Engagement score**, and **Adoption trends**.
- **Custom report views by HRBPs, managers, or admins**
- **Monthly email digest** to keep stakeholders in sync – with AI powered insights and recommendations

=====

Integration capabilities

- **Collaboration apps**
 - **MS Teams and Slack** – recognize, reward, and survey within the chat interface.
 - **Gsuite, Outlook and Viva** – embedded R&R and surveys in the flow of work
- **HRMS integration**
 - Supports major platforms like HiBob, UKG Pro, ADP, BambooHR, Oracle, SAP SuccessFactors, Zoho People, Workday and +20 other HRMS systems

- **Supports custom APIs or SFTP** (Secure File Transfer Protocol) for integration with any internal system.

=====

Mobile app: Recognition & rewards on the go

Empuls mobile app is available in both iOS and Android.

- Recognize employees and redeem rewards on store
- Celebrate special occasions – birthdays, service anniversaries and more
- Learn about earning incentives or next earning opportunity
- Participate in surveys and polls
- Access perks and employee benefits such as prepaid card
- Access company news and announcements

Empuls mobile empowers blue-collar and deskless teams. And is also available via kiosk/tablet for distributed teams.

What does having a mobile app mean for your organisation?

- **Increased adoption** - making the Empuls available on mobile means more touch points for each user – and makes it easy to log in at any time.
- **Culture boost** - with increased usage comes more recognition between peers, more celebrating of wins, more congratulations for completed projects and more utilisation of benefit programs.
- **Ease of use** - an app for your employee recognition program will mean that it's just that much easier for people to get in the platform and easily recognize each other and redeem points

=====

White labelling & flexibility to choose modules

- **Full branding control** – colors, logos, fonts, and naming conventions
- **Home page editor** – this powerful tool puts you, as an admin, in complete control of your brand on Empuls home page. Enjoy the flexibility of designing a unique homepage using a templated approach
- **Module-wise enablement** – value-based pricing model that includes the number of employees and the modules you choose.

- Pay-on-redemption billing model
- **Regional deployment support** – support local currencies, COLI configuration for awards, local language support to provide a seamless experience.

=====

Why choose Empuls over competitors?

Empuls stands out with its;

- AI-led automation for R&R, employee gifting, and surveys
- Comprehensive global rewards marketplace
- Integrated communications hub with social intranet
- Unmatched personalization and modularity
- Dedicated customer success team
- Enterprise-grade compliance and security (SOC 2, GDPR, ISO)

=====

Compliance, implementation & success assurance

Security & compliance

- SOC 2, GDPR, ISO, HIPAA, CCPA compliant
- VAPT-tested, MFA (multi factor authentication), and firewall protection
- Our cloud hosting services provide a flexible and scalable way to store and access data from various locations – Oregon (USA), UAE, India, and Saudi.

=====

Implementation support

- Dedicated project manager
- Concierge onboarding and data migration
- White-glove setup and branding alignment
- End-user and admin training

=====

Ongoing success

- Monthly reviews and optimization plans

- Admin success dashboards
- 24/7 multilingual support
- Feedback loops to shape the roadmap
- Chat-bot to support admin and end user queries

Which modules work best as per regions

- UK/Europe - Benefits, Wellness, Perks & discounts, rewards, incentives
- India - rewards, gifts, sales incentives
- USA - survey, recognition, rewards, incentives, wellness
- Middle east - Wellness, perks, incentives, gamification, social intranet, rewards
- SEA - gifting, rewards, incentives

=====

Invest in your employees with Empuls

Empuls is more than a platform – it’s a culture-enabler. Whether you want to build stronger teams, foster alignment, recognize efforts, or listen deeply to your employees, Empuls gives you the tools to do it all – seamlessly, globally, and with measurable outcomes.

[attach an image with big client logos who have/ are using Empuls]

Join 1,000+ companies and 100 million+ users across 150+ countries who trust Empuls to build high-performing, happy workplaces.

1. **Product owner:** Mallikarjun & Chinmay
2. **Top 5 industries we win in –** IT/ITES/SaaS, BFSI, Health, FMCG
3. **Link to Product Documentation:** Website help section
4. **Link to a “Good” demo:**

ackmecorpde no	JS	https://ackmecorpdemo.xoxoday.com	chinmay+usdemo3@xoxoday.com	lookmeup@13

paypal me	JS	https://paypalme.xoxoday.com/home/hrinmay+peter@xoxoday.com	paypal@2023
-----------	----	---	-------------

5. **Product One Pager:** [Empuls Product One Pager](#)

6. **ICP employee count (minimum)** 200+ Employees

7. **Disqualifying attributes (hard “no” criteria)**

Less than 50 employees, very small orgs with no HR function, no HRIS, or no engagement mandate

8. **Good tech/stack signals (tools commonly present in good-fit accounts)**

- HRIS (Workday, SAP, Oracle, ADP, HiBob, UKG, BambooHR, Darwinbox, Keka, etc.)
- Collaboration tool - Slack / MS Teams / Outlook / Viva/Gsuite

9. **Any integration prerequisites that make a deal easier or harder?**

Empuls integrates easily when companies have an existing HRIS with API access, SSO enabled, and collaboration tools like Slack or MS Teams in place. Clean employee data and an assigned HR/IT owner significantly speed up implementation. Deals tend to take longer when organizations lack a centralized HR system, have strict data residency or on-premise deployment needs, or operate on custom in-house HR platforms.

10. **Which events make purchasing urgent for the buyer?**

- HR tech refresh
- Low engagement or low enps
- Rapid hiring or scaling
- Remote or hybrid work
- Automation of employee gifting/rewards/sales incentives/surveys/wellness initiatives

11. **What does “ready to buy” look like?**

(Examples: budget approved, running surveys, replacing a tool, exec sponsor

identified, etc.)

Ready to buy” looks like a company with budget approval, an executive sponsor (typically CHRO or Head of HR), and a clear trigger such as low eNPS, replacing an existing tool, or a broader HR tech refresh. They have defined rollout timelines, IT alignment for integration, and agreement on success metrics (adoption, engagement lift, and retention impact). Sometimes, the decision is also to reduce existing tool costs or existing tool issues.

12. Economic buyer (title/role)

- CHRO
- Chief People Officer
- Employee experience/culture leaders
- Head of HR
- CXO (in mid-market)
- HRBP
- Director of Total Rewards
- CRO/ Chief Revenue Officer – for sales commissions/ incentives
- Director of Employee Wellness/ Benefits

13. Key evaluators (titles/roles involved in evaluation) :

CHRO, CXO, Culture, Rewards, Compensation & benefits

- **Influencers / blockers (titles/roles and why)**
- IT (security & integration approval)
- Finance (budget allocation, reward liability)
- Procurement (contract & vendor evaluation)
- Legal (DPA, data residency, compliance review)
- CEO/ MD in startups

14. Procurement/legal involvement — what typically happens?

(What triggers their involvement, common requirements, typical timeline)

Procurement and legal typically get involved once commercial alignment are reached. Legal reviews are triggered during NDA and MSA stages and often include InfoSec/security assessments (SOC 2, GDPR, data processing agreements, VAPT reports) during onboarding. Procurement usually steps in during commercial finalization — validating pricing, issuing PO, vendor onboarding, payment terms, and compliance documentation. For enterprise deals, this process can add 2–6 weeks depending on security and contractual requirements. RFP process also involves these stakeholders

Common Requirements:

- SOC2 / ISO / GDPR documentation
- VAPT reports, MFA confirmation
- DPDA & SLA
- Security questionnaires

Timeline:

2–6 weeks depending on enterprise complexity

15. Top decision criteria buyers score us on

- Security/compliance
- Ease of integrations with existing systems
- Pricing
- Global support
- Vendor reputation
- Product features, quality, UX, UI etc
- Rewards catalog

16. Typical buyer pain (what problem are they trying to solve?)

Low engagement, manual or biased recognition programs, poor survey insights, fragmented communication, and difficulty managing global rewards catalog, multiple

point solutions for each like surveys/RnR/gifting/communication, Cost vs Roi

17. Primary use case – R&R

18. Secondary use case

- Surveys & feedback
- Sales incentives
- Employee gifting
- Social intranet
- Benefits management
- Wellness/perks

19. What category do we want to own? - RnR

20. Story for urgency (“why now?”)

(What changed that makes waiting costly?) - Generally, no one buys urgently, this is a planned buying specially during renewal cycle of existing tool or a fresh implementation

21. Top 10 competitors we see most often

Awardco, Workhuman, BiWorldWide, TerryBerry, Achievers, OC tanner, Edenred, Advantage Club, Bonusly, Reward Gateway, PerkBox, Vantagecircle

22. Our differentiators (what we do better/different — keep it to 3–5 bullets)

- Multi-country enterprise programs
 - One of the largest reward redemption marketplaces in terms of categories, catalog, geographies, variety, currency choice etc
 - Multi-region deployment capabilities across different clouds
 - Customer support & success across geographies
 - Experience of handling large enterprise (50,000+ employees) clients across multiple countries
 - Highly configurable platform to serve customized needs of enterprise clients

- Full suite on varied and related use cases in rewards, incentives & loyalty industry
- One solution for multiple dimensions of employee experience
 - Holistic employee engagement tool instead of multiple point solutions. This means fewer vendors, lower cost and simpler integration.
 - Clients can choose one or more modules like rewards, recognition, sales incentives, fringe & lifestyle benefits, surveys, feedback, social intranet, fitness challenges, rewards catalog, wellbeing catalog in a single solution.
 - Xoxoday owns the reward catalog whereas most competitors outsource this. Single rewards catalog across 100+countries covering more than 20 categories like gift cards, prepaid cards, shopping, swags, flights, hotels, experiences, dining, subscriptions, utilities, lounges, airmiles, charity, donations, mobile top-ups, wellness catalog, gaming, custom client-specific rewards etc.
 - Feature rich to handle heterogenous use cases across geo and industries
- Enterprise grade platform
 - Soc 2, ISO 27001, CCPA, DPDP, GDPR etc compliant
 - Scalable architecture & robust APIs
 - Flexible deployments as a SaaS platform, APIs, embedded solution, white label solution. Very few competitors offer this flexibility.
- Value for money & TCO
 - Single tool for multiple use cases in employee experience
 - Established RoI through insights on eNPS, sales performance, retention, skills, productivity etc
- Deep integrations with the workflow tools like MS Teams, Slack, GSuite, Outlook, and HRMS/CRMs like ADP, SAP, Darwinbox, UKG, Workday, Hubspot, Salesforce, BambooHr, Hibob etc. Also connected with work tools like Jira, Zendesk, etc.
- Professional services, project mgmt, customer care & customer success
 - Full support on consulting & project management during the onboarding
 - Customer support & success across geographies and time zones. Dedicated team for MBR & QBRs. AI powered 24*7*365 bot support.
- AI Copilot - Various AI capabilities across the product and features, insights and analytics, program optimization, automation.
- Regional nuances
 - Multi-lingual product for more than 50 popular languages
 - Multi-currency, cost of living and purchase parity
 - Local tax governance for rewards and incentives
 - Local data residency & Cloud deployment locally in all popular clouds

- Local rewards catalog across categories
- Account management, Customer support and project mgmt in local time zones

24. Most common objections

1. Platform-Level Questions (Overall Product)

- Why should we choose Empuls instead of buying separate tools?
- How is Empuls different from other platforms?
- How scalable is the platform if we grow globally?
- Can we enable only certain modules and expand later?
- How long does implementation typically take?
- What integrations do you support with HRMS, CRM and collaboration tools?
- How secure is employee data on the platform?
- What reward options are available in our country?
- How quickly are rewards delivered?
- What ROI can organizations expect?
- How do you ensure employees actively use the platform?
- Can Empuls support multiple countries and currencies?
- How do we control reward budgets?
- Why should I change existing tool?
- These features already exist in our HRIS, why should we take from you
- I already use slack/Gsuite/teams

25. Proof buyers want to see

- ROI data
- Case studies & customer references
- Gartner/social proof
- Product demo & free trial as per client use cases
- Free proof of concept specially in sales incentives

26. Top 3 customer stories (company + use case + measurable outcome)

Western Digital
CGI
Tesco
Mastek
SanDisk
Riyadh Air
DAMAC

27. Best-performing entry offers (by segment, if applicable)

(Examples: engagement audit, benchmark report, ROI calculator, 90-day rollout plan, etc.) - NA

28. Which CTAs have worked so far? (

- ~~Book a demo~~
- Get pricing
- ~~Talk to an expert~~
- Download guide
- Watch demo video
- Assessment/audit
- ROI calculator
- Other

29. Have we offered pilots? - Yes

- *Length – 1-3 months*
- *What's included – All features or as per client needs*
- Product & implementation team is involved along with sales

31. Best current partnership for this product (who + why it works + results)

32. Ideal new partnership (type of partner + why + what success looks like)

=====

=====

Section 1: Xoxoday Plum (Reward distribution, rewards redemption platform)

1.1 What Plum is

- Plum sits in between rewards demand and supply something like below

DEMAND (Use Cases)

SUPPLY (Reward Options)

- Send rewards/gifts in various ways
 - All in one Xoxo code/points/links
 - In bulk or individual
 - Send a category directly like gift cards or send in the form of all in one codes/links/points
 - Send through excel sheets, emails, SMS, whatsapp or API
- Redeem rewards on a variety of categories globally on an online marketplace from Xoxoday
- Rewards can be physical or digital or both. Some categories are digital and some are physical and some are both
 - E.g. hotels are sent digitally via email/sms
 - Physical gift cards or merchandise are sent physically
 - Gift cards can be both digital and physical

=====

1.3 How Plum is used (two adoption models)

- Portal/Admin-led Rewards Distribution: business teams run programs and distribute rewards through Plum Admin Portal. These can be sent in the form of codes, links, points or direct categories like gift cards to the email/whatsapp/SMS etc of a user.
- Rewards store frontend: platforms fulfill rewards using REST APIs, SSO-based Plum storefront, or a custom storefront. The customer comes to this storefront URL like stores.xoxoday.com and redeems the reward of their choice.

=====

1.4 Key differentiators (why Plum)

- Exhaustive rewards catalog across categories: gift cards, prepaid cards, charity, merchandise, swag stores, travel, mobile top-ups

- Multi-geo fulfillment strength across 100+ countries
- Amazon partnership in select markets: India, US, UK, Spain, Germany. Customers can redeem on Amazon website in these countries
- Multi-currency for different geographies
- Enterprise-grade budget/governance controls (roles, thresholds, maker-checker)
- Flexible distribution modes to fit different program styles (points/codes/links/direct gifting)
- API-led fulfillment + storefront options (SSO/custom)
- Strong integration ecosystem across marketing automation/CRM/HR/loyalty platforms

1.5 Plum pricing strategy - Plum uses a mix of various pricing strategies depending on geography and client type

- **Pricing in Plum depends upon following factors**
 - Geography, Type of client and business
 - Volume commitments (GMV)
 - Custom pricing is done for large clients and volumes
 - Cashbacks can be given on large volumes (e.g. 0.5% of the total GMV ll be given back end of year)
- **One time implementation**
- **Annual SaaS or AMC**
- **Xoxoday reward Codes/links/points billed on delivery**
 - The client is charged on the total value of delivery whether the rewards are redeemed or not (e.g. if the client purchased 10,000 USD rewards but redeemed only 5000 USD, the client still pays 10,000 USD)
 - Xoxoday earns the unredeemed rewards (expiry)
 - Xoxoday may waive off any SaaS or implementation fees as it already earns better in unredeemed rewards
 - Xoxoday also earns on the margin earned in redemption of 5000 USD in the example
 - Net revenue to Xoxoday = 5,000 USD of unredeemed rewards + Margin on 5000 USD redeemed rewards (average around 5%) + any SaaS or implementation fees
- **Xoxoday reward Codes/links/points billed on redemption -**

- The client is charged only on the value of rewards actually redeemed (e.g. If the client purchased 10,000 USD rewards but redeemed only 8000 USD, then client pays only 8000 USD)
- No expiry for Xoxoday
- Xoxoday can price by annual SaaS or one time implementation fees if possible
- Xoxoday earns on the margin earned in redemption of 8000 USD in the example
- Net revenue to Xoxoday = Margin on 8000 USD redeemed rewards (average around 5%) + any SaaS or implementation fees
- Brand gift cards and any other categories
 - If the client directly purchases brand gift cards or any other categories from Xoxoday, then Xoxoday earns on the margin earned on the purchase
 - E.g. If client purchases 10,000 USD brand gift cards from us, then we get around 4% of the margin on 10,000 USD
 - Sometimes the client may also ask additional discounts on bulk purchases
 - Xoxoday can charge surcharges (markups) over and above the margins we get from the vendors. This is especially important in low margin categories like jewellery, utilities, prepaid cards, cash cards, Amazon gift card etc
 - Xoxoday net revenue = AMC + Annual SaaS + margin on redemption around 4% + markups in some cases
- Storefront or marketplace
 - Xoxoday can charge annual SaaS + annual maintenance
 - If the client needs lot of custom UI, features etc in the storefront, then we can charge a premium
 - Xoxoday can charge surcharges over and above the margins we get from the vendors. This is especially important in low margin cate
 - Xoxoday net revenue = AMC + Annual SaaS + margin on redemption around 5%
- Offers/perks/discount marketplace
 - Xoxoday gives discounts on its catalog. E.g. if Xoxoday gets 10% discount from vendor, then it can keep 5% with itself and pass 5% to client or end user
 - The discounts can be structured as below
 - Pass entire discount to client or end user - In this case Xoxoday charges annual SaaS + AMC
 - Pass partial discount to end user only
 - Pass partial discount to end user and partial to client
 - Xoxoday net revenue = AMC + Annual SaaS + margin on purchase of discounts/offers

=====

Section 2: Reward types & Admin Portal Capabilities

2.1 Reward types Supported

Plum supports the following type of rewards via the Admin Portal:

1. Reward Points (Xoxo points)
2. Reward Codes (Xoxo codes)
3. Reward Links (Xoxo links)
4. Gift Cards & other categories directly (Direct Gifting)

Comparison Table – The above 4 types are largely similar except for some key differences. Customers use it as per their unique requirements

Capability / Feature	Reward Points	Reward Codes (Xoxo Codes)	Reward Links (Xoxo Links)	Gift Cards (Direct)
Send individually	Yes	Yes	Yes	Yes
Bulk send via CSV upload	Yes	Yes	Yes	Yes
Scheduled sending	Yes	Yes	Yes	Yes
Channels supported (Email/SMS/WhatsApp)	Yes	Yes	Yes	Yes

Recipient must login	Yes	No	No	As per brand vendor rules
Guest checkout supported	No	Yes	Yes	As per brand vendor rules
Partial redemption	Yes	Yes	No	As per brand vendor rules
Multiple instruments per checkout	Yes	Yes (up to 10 codes)	NA	As per brand vendor rules
Top-up with Payment Gateway (code + PG)	Yes	Yes	NA	As per brand vendor rules
Campaign feature	No	Yes	Yes	No
Category-level catalog restriction	Yes	Yes	Yes	NA
Send physically	No	Yes	No	As per brand vendor rules
Redemption Experience customization	Yes	Yes	Yes	No
Email template customization (Subject/Logo/Banner/Body/CTA)	Yes	Yes	Yes	Yes
Send to self" (admin receives link/codes for own distribution)	No	Yes	Yes	Yes
Reports & analytics	Yes	Yes	Yes	As per brand vendor rules

Wallet Deduction at the time of issuance (On-Generation)	Yes	Yes	Yes	Yes
Wallet Deduction at the time of redemption (On-Redemption)	Yes	Yes	Yes	No
Transferability	No	Yes if not restricted to domain or email	Yes if not restricted to domain or email	Yes
Cancellation & Refund	Yes if unused	Yes if unused	Yes if unused	As per brand vendor rules
Rest API	Yes	No	Yes	Yes

2.2 Reward Codes (Xoxo Codes) - E.g. XO234ZYT67 (alpha numeric code)

Reward Codes are a distribution mode in Plum that allow admins to issue value-backed codes to recipients. Recipients can redeem these codes via **guest checkout** and use them across a broad reward catalog, with campaign-level governance and communication customization.

Key Features on Admin side

- Admins can send Reward Codes via Email, SMS, and WhatsApp.
- Can be send digitally or physically
- Send individually + add multiple recipients in one send
- Bulk distribution via CSV template
- Reward denominations can be as per your choice
- Eligibility control (“Who can redeem”) - Admin can set who is eligible to redeem the code (tagged to recipient email or mobile number, tagged to company domain). This helps in controlling the usage of reward by the intended audience.
- Expiry configuration - Admin can configure expiry of the Reward Code as per program requirements. It can be anywhere from a few days to years.

- **Scheduled sending** - Admin can schedule Reward Code to be sent at a later date/time instead of sending immediately. Helps teams plan rewards across geo in one click (festivals, anniversaries, quarterly incentives) etc.
- Offline distribution via PDF export (printable codes) —useful when recipients don't have email/phone access, and for shop-floor workers where printed distribution is more practical.
- Physical reward code cards (printed code + QR) - Ability to issue physical cards that contain the Reward Code and a QR code that points recipients to the redemption storefront URL. Solves last-mile adoption for offline/field audiences; improves redemption conversion by making the action “scan → redeem” simple; ideal for events, factories, warehouses, retail staff.
- Admin can make the reward redemption with or without login. So the recipient of award can redeem the reward with or without login as per the admin setup
- Reward code campaign - Admins can create campaigns with custom redemption options, denomination, locations, branding options like logo, email content, redemption page, language, currency etc
 - Email customization (Subject, Logo, Banner, Body, CTA)
 - Admin can personalize SMS message content.

Redemption Experience & Rules (Recipient-side behaviors)

- Guest checkout redemption, this reduces friction of login etc
- Partial redemption - Recipients can redeem part of the code value and use the remaining balance later until exhausted.
- Combine multiple codes in one checkout (up to 10 codes in one checkout)
- Code + Payment Gateway (buy above code value) - Recipients can use the Reward Code value and pay the remaining amount through a payment gateway to purchase items priced above the Reward Code value

2.2.5 Reporting & Operational Visibility

- Admins can view distribution and redemption visibility through Reward Code reports, including delivery status and communication activity.
- Supports reconciliation, program tracking, audits, and operational follow-ups to maximize redemption.

2.2.6 Why should you use Reward Codes

- Lowest-friction redemption (guest checkout)
- High flexibility (partial redemption + combine up to 10 codes + payment gateway for extra payments)
- Send in physical or digital or both
- Reward codes are transferrable if they are not attached to any email or domain by the admin
- Program consistency and governance via campaign-based catalog and branding controls

2.3 Reward Links (Xoxo Links) - e.g. <https://stores.xoxoday.com/link/xy453u-45>

Reward Links are a distribution mode in Plum where admins send a unique redemption link to recipients. The link is issued under a Reward Link Campaign, and redemption happens through the configured marketplace experience.

2.3.1 Send Rewards (Admin capabilities)

- Multi-channel delivery through Email, SMS, WhatsApp
- **Recipient binding (tag link to identity)** - While sending, Reward Links can be tagged/bound to a recipient identifier such as email, mobile number, or a domain. Reduces misuse and leakage by ensuring only the intended audience can access or redeem the link; also helps program owners map links to cohorts and track usage.
- **Send individually or Bulk send via CSV template**
- **Send to self-distribution** - Admin can send a Reward Link to themselves. This allows the admin to store the link in their own system/database and then distribute it to end users through their own communication channels. This enables tighter control over the end-to-end workflow—customers can use their existing CRM/marketing automation stack for communication without relying on Plum’s native messaging as the only distribution mechanism.
- **Scheduled sending** - Admin can schedule Reward Links to be sent at a later date/time instead of sending immediately. Helps teams plan launches (festivals, anniversaries, quarterly incentives) etc
- For more programmatic execution of the same use case, the admin can also generate and manage links via the Reward Links APIs.

2.3.2 Reward Link Campaign (Campaign capabilities)

- Create a new campaign / choose an existing campaign while sending links. Ensures repeatability and program consistency—campaign becomes the standard container for catalog rules + branding + communication.
- Single-category campaign rule (no category mixing). Reward Link campaigns are configured for one reward category per campaign and categories cannot be combined in the same campaign. This keeps campaigns simple to govern, easy to explain to recipients, and reduces confusion in redemption expectations.
- Campaigns can be created for almost all categories like Gift Cards, Merchandise, Lounge
- Reward Link campaigns are set up as fixed denominations (value is defined at the campaign configuration level).
- Branding - Admin can add a logo, background colors, email subject/banner/content customization etc for the Reward Link campaign experience.
- SMS or Whatsapp or Email template customization (Subject, Logo, Banner, Body, CTA)
- Clients can also use Reward lin APIs for integration

2.3.5 Redemption Experience & Rules (Recipient-side behaviors)

- Recipients redeem via a unique link issued under the campaign.
- Recipients see rewards governed by the campaign's configured category and rules (single-category rule).
- Admins can track Reward Link issuance and activity through Reward Link reporting views (filters and export where supported).

2.3.7 Recommendation Guide (When to propose Reward Links)

- A unique, shareable redemption link per recipient (simple distribution)
- Simple redemption without too many options or denominations. Best for one click redemption experience
- Lightweight branding controls (logo + background color) without a custom storefront build
- Recipient binding/eligibility constraints via email/mobile/domain tagging
- Scalable distribution with bulk upload and operational tracking

2.4 Reward Points (Xoxo Points)

Reward Points are a distribution mode in Plum where admins allocate points to recipients. Recipients redeem points on the marketplace/storefront.

2.4.1 Send Rewards (Admin capabilities)

- Admin can send Reward Points through email, sms, whatsapp.
- Admin can send points individually or bulk via CSV.
- Admin can schedule the send in advance
- Admin can customize the redemption marketplace
- Admin can customize email subject, email message, logo, banner, SMS or whatsapp message, and CTA button text.
- Admin can choose from predefined banners or upload a new banner
- Recipients use their points balance to redeem rewards on the marketplace/storefront.
- Admin can access reward points reports with various details
- Ability to re-trigger/resend points distribution from reporting workflows
- Clients can also use Reward points APIs for integration

2.4.6 Recommendation Guide (When to propose Reward Points)

- Best suited when you know the recipient email ids or phone numbers
- There is a repeat reward to the same user. So that you can just add to new points to their accounts
- Very secure as the points are strongly tied with recipients email/phone login
- Login is mandatory for redemption

2.5 Brand Gift Cards or other categories (Direct Gifting)

Gift Cards (Direct Gifting) is a distribution mode in Plum where program owners can send a specific brand/product voucher directly to recipients. This mode supports both bulk distribution (via CSV upload) and individual sending, along with strong communication personalization.

2.5.1 Send Rewards (Admin capabilities)

- Admin can send in bulk via CSV or individually.
- Admin selects the gift card product/brand and enters the voucher value and quantity.
- Admin can edit the email subject, CTA button, banner or body copy.

- Clients can integrate with the brand gift card or category APIs.

2.5.3 Redemption Experience & Rules (Recipient-side)

- Recipients receive a brand gift card/product via the selected communication channel and can use it as per brand/product terms.
- Admin can track funding, transactions, and relevant details in the Payments module.

2.5.5 Recommendation Guide (When to propose direct brand Gift Cards or other categories)

- When the reward program needs to send specific gift cards or categories instead of a choice based Xoxoday reward.
- The end user doesn't need to come to Xoxoday to redeem. The end user can directly redeem it in the brand website or offline store

=====

Section 3: Admin Portal Settings & features

3.1 Settings → Verifications (KYB / Brand KYC for Catalog Access)

3.1.1 Amazon Brand KYC - Amazon requires verification to ensure compliant usage, prevent misuse, and validate legitimate reward distribution intent.

3.2.1 Storefront branding (Logo) - Super Admin can add/update the **company logo** shown in the redemption experience.

3.2.2 Redemption URL configuration - Super Admin can configure the **storefront redemption URL**. e.g. stores.xoxoday.com/siemens

3.2.3 Catalog customization

- Super Admin can tailor the catalog by selections as below:
 - Enable/disable **entire categories** (Gift Cards, Merchandise, Experiences, Flights, etc.)
 - Enable specific **countries** (region-specific catalog)
 - Enable specific **denominations** (price-based catalog control)

- Enable specific **subcategories**
- This aligns redemption options to program intent, internal policy/compliance constraints, and budget/margin objectives—while reducing choice overload and improving conversion.

3.2.4 Rename points system - Super Admin can rename “points” terminology (e.g., coins/miles/stars). This helps in customer brand language, improving adoption and familiarity—especially for loyalty/banking use cases.

3.2.5 Payment Gateway (PG) enable/disable - Super Admin can decide whether end users can pay via **Payment Gateway** during redemption (including the ability to disable PG). Customers may want strict “points-only” redemption for governance/cost control, or enable PG to reduce drop-offs and allow premium redemption above the reward value.

3.3 Settings → Notifications (Deliverability, Sender Identity, Templates, Footers, Reminders)

3.3.1 Domain authentication (deliverability) - Admin can authenticate their sending domain by adding required DNS records, optionally emailing the DNS instructions to IT, and verifying setup in portal. This improves deliverability and reduces spam placement—directly increasing open and redemption rates at scale.

3.3.2 Sender name personalization - Admin can configure the **sender name** shown in emails.

3.3.3 Email footer management - Admin can add/remove/modify **email footers** used in reward communications. This is to ensure brand consistency and supports compliance/legal disclosures where needed.

3.3.4 Redemption reminders (unredeemed nudges) - Admin can configure reminders for users to redeem **points/codes/links/gift cards**.

3.4 Settings → Admins (Roles, Access Control, Threshold Governance)

3.4.1 Role-based access: Super Admin vs Admin - Plum supports **Super Admin** and **Admin** roles. Super Admin has elevated controls (user management, thresholds, permissions).

3.4.2 Add admins / set access level - Super Admin can add new users and assign Admin or Super Admin access.

3.4.3 Threshold controls (CRUD + resets) - Super Admin can create/update thresholds, update limits, reset “amount used”. Prevents overspend, enables delegated budgets, and supports safe scaling across multiple program owners.

3.4.4 Permission controls (wallet balance & reports visibility) - Super Admin can configure whether Admins can view **company wallet balance** and/or access **reports**. Protects sensitive financial data and enforces least-privilege access.

3.5 Settings Summary Matrix (What, Why, Who)

Settings Area	What you can configure	Why it exists (business value)	Who typically uses it
Verifications (Amazon Global KYC / Amazon India KYC)	Apply for catalog verification; submit company + program details; upload required documents (India)	Unlock high-trust catalogs (Amazon), ensure compliance, reduce misuse/fraud, validate legitimate program intent	Super Admin (with compliance/ops support)
Storefront (Branding)	Company logo, storefront look/feel essentials	Builds recipient trust, improves brand recall, reduces “is this legit?” confusion	Super Admin, Marketing/Ops
Storefront (Redemption URL)	Configure/manage redemption URL	Enables consistent, white-labeled redemption entry point across all campaigns and comms	Super Admin, IT (as reviewer)

Storefront (Catalog customization)	Enable/disable categories; filter by country; filter by denomination; subcategory filters	Aligns catalog to program goals, internal policy, geo coverage, and cost/margin strategy; improves conversion by reducing choice overload	Super Admin, Program Owners (HR/Sales/Channel), Finance (as reviewer)
Storefront (Rename points system)	Rename “points” terminology (coins/miles/stars etc.)	Matches customer brand language → higher adoption and familiarity, especially for loyalty/banking	Super Admin, Marketing/Product
Storefront / Redemption Controls (PG enable/disable)	Enable/disable payment gateway during redemption	Supports program policy: points-only control vs allowing top-up for premium redemptions; reduces drop-offs	Super Admin, Finance/Compliance
Notifications (Domain authentication)	Authenticate sending domain; send DNS records to IT; verify in portal	Better deliverability → higher opens/redemptions; fewer delivery-related tickets	Super Admin, IT
Notifications (Sender name)	Set sender display name	Trust + recognition → better open rate and reduced recipient confusion	Super Admin, Marketing/Ops
Notifications (Email footer)	Add/modify/remove email footers	Brand consistency + legal/compliance disclosures where needed	Super Admin, Legal/Marketing
Notifications (Redemption reminders)	Configure reminder nudges for unredeemed points/codes/links/gift cards	Improves redemption rates, reduces “missed reward” dissatisfaction, increases program ROI	Super Admin, CS/Ops

Admins (User management)	Add/remove admins; set role (Admin/Super Admin)	Scales operations with governance and least-privilege access	Super Admin
Admins (Threshold governance)	Create/update threshold limits; reset usage; promote admin	Prevents overspend, enables delegated budgets per team/program owner	Super Admin, Finance (as reviewer)
Admins (Visibility controls)	Control whether Admins can view wallet balance and/or access reports	Protects sensitive financial data and enforces least-privilege	Super Admin, Finance/Compliance

=====

Section 4: Pricing models, Payments, Wallet & Invoicing

Foundation: Plum follows a **pre-funding** model. Before issuing any rewards, customers must maintain sufficient funds in their Plum wallet. Postpaid Wallet credits are given on selective criteria only.

4.1 Wallet & Base Currency (Single-wallet model)

Single base-currency wallet per account

- Every Plum account has **one wallet** with a **single base currency** (e.g., USD / GBP / INR). All funding and wallet debits happen in this base currency. Keeps accounting and reconciliation clean, avoids FX ambiguity, and simplifies financial controls for customers and Xoxoday.

Multi-currency requirement handling (multi-account approach)

- If a customer needs multiple currencies, Plum supports it by creating **multiple accounts**, each with its own base currency wallet. If a user's email is mapped to multiple currency accounts, after login verification the user selects which account to

access. Preserves the simplicity of a single-currency ledger per account while still supporting global customers through governed separation of accounts.

Role note

- **Only Super Admin** can manage wallet funding and invoices (as per your policy).

4.2 Add Funds to Wallet (Funding Methods)

Plum supports multiple funding methods so customers can match their internal finance workflows.

4.2.1 Pay Online (Instant) - Super Admin enters an amount and recharges the wallet using online payment methods (e.g., card/UPI/netbanking depending on geo).

4.2.3 Pay Offline (Proforma Invoice → Offline payment) - Super Admin generates a **Proforma Invoice** from the portal and completes offline payment via finance/procurement workflows (bank transfer/ACH). This is required in enterprise procurement processes where payments require invoice documentation and internal approvals.

4.3 Offline Invoice Creation (Proforma) — Advanced Controls

Add PO details on invoice - While generating an offline (proforma) invoice, Super Admin can add po number and po date. This helps customers map invoices to internal procurement systems and approval workflows, reducing delays and finance back-and-forth.

4.4 Billing Details (Recharge & Invoicing) - Recharge screens show Billing Details with an option to update/change (as per setup).

4.5 Transaction History (Wallet Funds Reports) - The Transaction History section provides a ledger-style view of wallet activity for operations and finance. There are various reports admins can download or see for analysis.

4.6 Invoice Management (Tracking Proforma Invoices) - Super Admin can view invoice records

4.7 Roles & Permissions (Payments) - **Only Super Admin** only can Add funds, generate invoices, view transaction history downloads, and manage invoice workflows.

4.8 Various invoicing and pricing models in Plum

Plum pricing and commercials can be explained using two wallet-deduction approaches.

4.8.1 On Generation Model (Wallet deducted at reward issuance)

- This is the preferred model for Xoxoday as it helps us to get the money from clients in advance. The reward distribution or redemption may happen over 1 yr. This helps in cash flows.
- Xoxoday bills the client on the value added in the wallet. E.g if a client wants to add 10,000 usd in its wallet, Xoxoday will bill for 10,000 usd. This balance keeps getting deducted as and when rewards are sent by the client.
- Wallet balance is deducted at the time of reward distribution/issuance (i.e., when the program owner sends Points/Codes/Links/Gift Cards).
- Operationally simple for customers: once issued, finance can treat it as a “spent budget”.

4.8.2 On Redemption Model (Wallet deducted at end-user redemption)

- This model is not preferred as Xoxoday gets the money only after the reward is redeemed by the end users. This creates cash flow issues for us
- Wallet balance is deducted **only when the end user redeems** the reward (i.e., when the reward is actually consumed).
- Xoxoday bills monthly on the total reward redeemed.
- For clients its a good model as it helps them to control costs and saves cash flows. But Xoxoday doesn't do this model except for few clients.

=====

5.1 Plum API Portfolio (3 REST APIs)

Rewards API

- Procure and send rewards (gift cards, merchandise, lounge, charity, mobile top-up, airmiles, perks) directly from your system.
- Best for a fully native rewards journey — your UX, your communications, Plum handles catalog and fulfillment.
- Supports real-time and delayed fulfillment; order status trackable via webhooks.
- [API Documentation](#)

Reward Points API

- Credit reward points to recipients programmatically based on events or triggers inside your product.
- Best for points-based ecosystems where issuance needs to be automated at scale.
- Recipients redeem points through a Plum-hosted storefront — no redemption logic required on your end.
- API [Documentation](#)

Reward Links API

- Generate and distribute reward links programmatically; recipients click to choose and redeem their reward.
- Best for link-based rewarding at scale where your system controls recipient identity, business rules, and communications.
- Aligned to portal Reward Link behavior — campaigns are pre-configured, links are issued via API.
- API [Documentation](#)

Environments

Both a Sandbox and a Production account are provisioned for every api type. Build and test against sandbox; switch to production when ready.

Environment	Auth Base URL
-------------	---------------

Sandbox	https://stagingstores.xoxoday.com/chef
---------	---

Production	https://accounts.xoxoday.com/chef
------------	---

Authentication

All APIs use OAuth 2.0 Bearer tokens. Generate a Client ID + Secret from the Admin Portal → API Credentials, then exchange them for an Access Token to include in every request header.

- Rewards API & Reward Links API share one token flow.
- Reward Points API uses a separate token flow (see product-specific auth docs).
- IP whitelisting is required — share your server IPs with your Implementation Manager.

Wallet Funding

All three APIs deduct reward costs from your Plum Wallet in real time. Fund the wallet before going live; orders will fail if the balance is insufficient.

Error Handling

All APIs return standard HTTP status codes. Two JSON error formats are used:

- Auth errors — { "error": "...", "error_description": "..." }
- API errors — { "code": ..., "errorId": "PLE...", "errorInfo": "...", "error": "..." }

See the full error code reference → [Error Handling docs](#)

Frontend/catalog experience enablement (filters for building UI)

- Customers can build a frontend catalog experience by applying filters such as:
 - **Country** (availability by region)
 - **Price** (range-based filtering)
 - **Voucher category** (e.g., Electronics, Food & Restaurant)
 - **Product category/type** (e.g., e-gift voucher, experience, physical voucher)
 - **Currency** (INR, USD, AUD, etc.)
- Helps customers create a “store-like” redemption UX inside their own product while controlling discovery, governance, and conversion.

5.7 REST API Comparison Table (Rewards API vs Reward Points API vs Reward Links API)

Dimension	Rewards API	Reward Points API	Reward Links API
Primary purpose	Issue & fulfill rewards programmatically from your system	Issue points programmatically	Issue & distribute reward programmatically
Best for	Reward fulfillment within customer product (e.g., gifting/loyalty/HRMS/CRM)	Centralized ecosystems where users can accumulate & redeem	Decentralized rewards at scale with low friction distribution
Output delivered	Successful fulfillment result (e.g., voucher details / instant confirmation)	Points credited to recipient (e.g., balance)	Unique reward link per recipient
Reward types covered	Gift cards, merchandise, experiences, charity, airmiles, top-up, perks (as applicable)	Points only	Any type of reward links (e.g., sign-based, expiration-controlled)
Communication ownership	Customer sends email to Xoxoday; Xoxoday sends (customer sends) reward details from Xoxoday (customer sends)	Primarily customer-owned (e.g., on their product UX)	Primarily customer-owned; “no self” pattern (e.g., not tied to Xoxoday)

Webhooks support	Supported (async order status updates)	Supported	Supported
Typical statuses	Processing / Delivered / Expired	Processing (credit status)	Processing status; Redemption tracked via Redemption ID
Idempotency reliability feature	Idempotency key support to prevent duplicates	Merchant-side idempotency via Transaction IDs (recommended)	Merchant-side idempotency via Transaction IDs (recommended)
Product catalog discovery / UI enablement	Plum provides building catalog UI elements (country, price, currency, categories)	Product catalog API	Merchant-linked redemption; catalog governed by merchant
Reconciliation support	Order details + order status + payment report APIs	Ordering via points reports + Transaction history	Ordering via link reports + Transaction history
Funding dependency	Funding required in merchant system	Funding required in merchant system	Funding required in merchant system
When to choose this	Merchant full API-led integration and strong status updates (webhooks)	Merchant points issuance and accumulation or	Merchant easy distribution and recipient-friendly redemption

=====

Section 6: Plum Storefront / Marketplace (Models + Capabilities)

6.1 Storefront / Marketplace Models Supported - Plum supports multiple storefront/marketplace models depending on how the customer wants to fund rewards and what experience they want end users to have.

6.1.1 Company-Funded Rewards Marketplace (Points-based, funded by customer) - A marketplace where the customer funds rewards via points and users redeem points against a

global catalog (points have monetary value). Best for loyalty programs and employee/partner marketplaces where the organization wants structured rewarding, budget control, and broad redemption options.

6.1.2 Virtual Points Marketplace (Gamified, no financial liability) - A marketplace where points do not represent monetary value; users use virtual points to unlock deals/discounts and pay themselves. Ideal for engagement/gamification programs where the customer wants high participation without reward liability or pre-funding constraints.

6.1.3 Discounted Deal Store (Points-free perks marketplace) - A storefront where users buy discounted deals directly using money (no points). Best for “perks” programs where the customer wants to offer value via discounts without managing a points economy.

6.1.4 Standard Storefront (Whitelabeled / Configurable) - A ready storefront with brand/config controls (catalog, banners, points rules, language, currencies) that can be embedded into the customer's ecosystem. Fastest go-live with robust redemption UX and strong governance without building a storefront from scratch.

6.1.5 Custom Storefront (Tailored UX on top of Plum fulfillment) - A bespoke storefront experience built to customer requirements while leveraging Plum’s catalog + fulfillment backend. Best for banks/fintech/large enterprises needing differentiated UX, curated journeys, custom navigation, or stricter governance.

6.2 Storefront Capabilities

6.2.1 Branded points currency (e.g., “ABCCoins”) - Customers can brand the points currency displayed to end users. Aligns with the customer’s brand vocabulary and improves adoption and familiarity, especially in loyalty and fintech ecosystems.

6.2.2 Admin control over point-to-currency conversion (global or category-specific) - Admin can configure conversion ratios between points and currency, either globally or at a category level. Enables controlled economics—customers can promote certain categories, manage margins, and tune perceived value without changing the full program.

6.2.3 Tier-based catalog visibility (e.g., Gold/Platinum) - Different user tiers can see different catalog sets or reward availability. Creates differentiated benefits for high-value users, increases engagement, and supports loyalty tier strategies.

6.2.4 Wallet recharge and budget tracking - Admin can fund and track marketplace budgets via wallet recharge and monitoring tools. Ensures predictable spending control and reduces reward disruption due to low balance; supports finance reconciliation.

6.2.5 Min and max points required per category redemption - Admin can define minimum and maximum points usage constraints by reward category. Helps customers steer redemptions toward preferred categories and manage cost exposure and program objectives.

6.2.6 Minimum points contribution rule + Payment Gateway (PG) split - Admin can enforce a rule such as “at least X% must be paid via points” and the remaining amount is paid by the user through a payment gateway. Common in fintech programs to drive adoption of the customer’s payment instrument while still offering incentives; also enables premium rewards without needing very high point balances.

6.2.7 Global catalog depth (20+ reward categories)

- Storefront and APIs supports a broad catalog including:

Category	Type	Approx average margins	Share in Xoxoday business	Key use cases	Why we do this category
Gift Cards	Physical & digital	4%	80%	All types of use cases	Very high demand & volume
Flights	Digital	6%	1%	Loyalty marketplaces	For marketplace completeness
Experiences	Digital	15%	<1%	Employee rewards & loyalty	Point of differentiation, luxury category, high margin
Hotels	Digital	15%	1%	Loyalty marketplaces	For marketplace completeness

					s
Airmiles	Digital		<1%	Loyalty marketplace s	For marketplace completeness
Swags	Physical	15%	2%	Employee rewards	
Merchandise	Physical	15%	5%	All types of use cases	
Gaming	Digital				
Utilities	Digital				
Mobile top-ups	Digital				
OTT & Subscriptions	Digital				
Health & Wellness	Digital			Employee rewards	Point of differentiation in employee rewards
Education & Learning	Digital			Employee rewards	Point of differentiation in employee rewards
Charity & Donations	Digital			Employee rewards	For marketplace completeness
Crypto	Digital				
Prepaid cards	Physical & digital			Channel, survey rewards	High demand and volume
Cashouts/Direc	Digital			Channel,	Used when

t bank transfers				survey rewards, sales incentives	value is large by clients
Event tickets	Digital				For marketplace completeness
Cashbacks/offers/coupons	Digital			Loyalty programs, employee discount programs	Costs less to clients, a way to retain

- Each of the categories have various sub categories. Some of them are below
 - Gift cards - Ecommerce, travel, electronics, grocery, fashion, entertainment, etc
 - Experiences - Gourmet, hobbies, events, spa, adventure, skills etc
 - Merchandise & Swags - clothing, gadgets, decor, office supplies etc
- Ensures one storefront can satisfy diverse user preferences and geographies, improving redemption conversion and reducing the need for multiple reward vendors.
- Different countries have seen different types of requirements in catalog. Here are some of the most asked in each region
 - India - gift cards, merchandise, prepaid cards
 - USA - gift cards, prepaid cards, swags
 - Meta - gift cards, flights, hotels, airmiles
 - SEA - gift cards
 - Uk/Europe - gift cards, prepaid cards, wellness, gym, etc
- Different use cases have different requirements of catalog as below
 - Banking & fintech Loyalty - entire catalog across categories
 - Employee RnR - gift cards, merchandise, swags, wellness, gym
 - Sales and channel incentives - cashouts, prepaid cards, gift cards, travel
 - Employee gifting - swags, merchandise, gift cards

- Gaming rewards - cashouts, gift cards
- Survey rewards - prepaid cards, gift cards
- Client gifting - Swags, merchandise
-

6.2.8 Multilingual and multi-currency support - Storefront supports multiple languages and multiple currencies. Enables global rollouts with localized experiences and reduces friction for distributed employee bases and international customers.

6.2.9 Personalized reward suggestions - Storefront can show personalized reward recommendations to users. Improves discovery, increases conversion, and reduces time-to-redeem by surfacing relevant options.

6.2.10 Real-time reporting and analytics - Admin gets reporting and analytics on redemption behavior and program performance. Helps program owners measure ROI, monitor adoption, and optimize catalogs and campaign rules.

6.2.11 Admin portal controls for catalog + maker-checker governance - Admin portal provides catalog management controls and maker-checker governance for sensitive catalog changes. Enables enterprise-grade governance, reduces accidental changes, and improves compliance and auditability.

6.2.12 RBAC for different teams - Role-based access control allows different teams (HR, marketing, finance, ops) to have controlled permissions. Ensures least-privilege access, protects financial data and governance settings, and enables scale across multiple program owners.

6.2.13 Approval-based redemption mechanism (with travel exceptions) - Redemptions can be routed for approval before processing; however, categories like flights/hotels typically bypass approval or require different handling due to dynamic pricing. Approval flows help enterprises control spend and ensure policy compliance; travel requires special handling because prices can change rapidly and delays can break booking accuracy.

6.3 Storefront Integration (SSO + Integration APIs) - This section explains how the Standard Storefront / Custom Storefront integrates with a customer's platform using SSO/SAML and a small set of Storefront Integration APIs. We're not listing endpoints here—only capabilities, responsibilities, and why each piece exists.

6.3.1 Integration concept (how it works end-to-end)

What

- The customer **redirects** an authenticated user into Xoxoday's hosted storefront using **SSO/SAML**.
- Once the user lands on the storefront, Xoxoday calls the customer's APIs to:
 - fetch the user's points/balance
 - deduct points when the user redeems
 - validate user identity/profile during checkout
 - credit back points if an order can't be fulfilled

Why

- Customers keep **their own points engine/ledger** as the source of truth.
- Xoxoday provides a **ready, global, multi-category storefront** and handles catalog/fulfillment while the customer retains control over balances and policy.

Documentation links

- About Storefront Integration:
<https://developers.xoxoday.com/reference/about-marketplace-integration>

6.3.2 Responsibilities: What Xoxoday provides vs what client must build

A) APIs provided by Xoxoday

SSO Redirection API - The customer calls Xoxoday's SSO Redirection API to authenticate and redirect the user into the storefront; Xoxoday issues an SSO token and can create the user account if it doesn't exist in Xoxoday. Enables seamless "logged-in" storefront access without forcing the user to create a new Xoxoday password/account. **Documentation links:**

<https://developers.xoxoday.com/reference/sso-redirection-api>

B) APIs required from the client (customer must implement)

Get Balance API - Xoxoday calls the client's Get Balance API to fetch a user's accrued points available for redemption. Ensures the storefront shows the customer's source-of-truth balance (bank/loyalty ledger).

Update Redemption API - Xoxoday calls Update Redemption to post points spent when a user places an order on the storefront. Xoxoday sends total points redeemed, order ID, and an array of order details. Keeps the customer ledger accurate and prevents double-spend.

Get Profile API - Xoxoday calls Get Profile to validate user details during checkout (identity validation + optional balance). If the client returns points balance in Get Profile, Xoxoday can use it instead of calling Get Balance separately. Adds a security layer to prevent misuse and ensures the right user and balance are used at checkout.

Refund API - Xoxoday calls the Refund API to credit back points if Xoxoday is unable to fulfill an order. Refunds are issued against the original Xoxoday Order ID and cannot exceed the order value. Enables automated reversals and clean ledger integrity without manual intervention.

Documentation links

- Get Balance API (client-side contract):
<https://developers.xoxoday.com/reference/get-balance-api-1>
- Update Redemption API (client-side contract):
<https://developers.xoxoday.com/reference/update-redemption-api>
- Get Profile API (client-side contract):
<https://developers.xoxoday.com/reference/get-profile-api>
- Refund API (client-side contract):
<https://developers.xoxoday.com/reference/refund-api>

6.3.3 Key integration features

Single Sign-On access (SSO/SAML) - User is authenticated via SSO/SAML and redirected into storefront without re-login. Keeps experience native and reduces user friction and support issues.

Ledger remains with customer - Customer's system remains the points engine; Xoxoday reads balance and posts deductions/refunds back to customer. Customers maintain financial control, compliance alignment, and consistent balance across their ecosystem.

Order-linked reconciliation - Redemption updates include order ID and item-level order details. Enables finance-grade reconciliation and support traceability.

Security validation at checkout - Get Profile can be used for identity validation and (optionally) balance. Reduces fraud/leakage and ensures correct user/balance at the moment of redemption.

Automated refund handling - Refunds are tied to original order ID and limited to the order value. Prevents over-refunds and keeps ledgers consistent and auditable.

6.3.4 Network/security controls (important for enterprise IT)

IP allowlisting - Xoxoday provides a list of IPs used to call client APIs for staging and production. Enables the client to allowlist traffic and restrict unwanted access.

Domain allowlisting - Xoxoday provides domains used in staging and production (e.g., storefront and account domains). Helps enterprises validate request origin and configure security controls.

Documentation links - About Storefront Integration (IPs + domains listed):
<https://developers.xoxoday.com/reference/about-marketplace-integration>

6.3.5 Environments & credential setup (for Storefront Integration APIs)

Sandbox vs Production - Customers set up environments and credentials for Storefront integration similarly to other Xoxoday APIs. Safe testing before production rollout; production hardening with IT allowlisting and operational readiness.

Documentation links

- Set up your environment (storefront copy):
<https://developers.xoxoday.com/docs/set-up-your-environment-copy-2>
- Create your API key (storefront copy):

=====

Plum

- **Product owner:** Piyush Agarwal & Sweta
- **Additional internal product stakeholders (names + teams):** Rishabh Kumar, Ravi Rana, Aarthi Krishnswamy, Siddhartha Bansal, Shabsikant Singh, Shyaram, Srivatsan, Anurag, Kuldeep, Anil
- **Top 5 industries we win in - BFSI, Fintech, IT/ITES, TIME (Telecom, Internet, Media & Entertainment), FMCG/FMCD, Market research**
- **Link to Product Documentation:** Plum website
- **Link to a “Good” demo:** Need to request from product team – Add product videos
- **Product One Pager:**
- **ICP employee count (minimum)** - Plum works well with companies as small as 10 employees and as large as 100,000 employees. Plum is like a swiss army knife which can fit more than 50 types of rewards use cases.
- **Disqualifying attributes (hard “no” criteria) :** Non-business entity, freelancers, B2C, KYC not approved
- **Good tech/stack signals (tools commonly present in good-fit accounts)**
Companies using HRIS rewards, CRM rewards, Loyalty Management Solution, In house RnR/loyalty tools, Survey tools, Referral tools, refund tools, gamification etc
- **Any integration prerequisites that make a deal easier or harder?** None
- **Which events make purchasing urgent for the buyer?** Festivals make the decision easier and faster, renewal from existing vendors, addition of a new geography where rewards are needed, better pricing needs
- **What does “ready to buy” look like?**
Someone who has reward budgets, or already using another tool or starting a new program in rewards
- **Economic buyer (title/role)**

- i. Product Manager
- ii. Loyalty Manager
- iii. HRBP
- iv. Procurement Manager
- vii. Panel Manager – Survey
- viii. Trade Marketing Manager

- **Champion (title/role)**

- a. Business team

- **Key evaluators (titles/roles involved in evaluation)**

Same as above, CIO, Infosec team

- **Influencers / blockers (titles/roles and why)**

Same as above

- **Procurement/legal involvement — what typically happens?**

- Pricing and payment terms
 - Data security and compliance
 - Taxation rules & invoicing

- **Top 5 decision criteria buyers score us on**

- Rewards catalog breadth and depth
 - Pricing and billing
 - Security/compliance
 - Analytics/reporting
 - Global support
 - On time delivery and CSAT
 - How soon Xoxoday can onboard new vendors
 - Multi currency and multi geo catalog

- **Typical buyer pain (what problem are they trying to solve?) -**

- **Primary use case** - Embedded rewards in their product via APIs/SSO, Employee Rewards, sales incentives, channel incentives, user testing rewards, gaming rewards, banking rewards, Consumer Promotions, Payouts, Survey Rewards, Referral Rewards, Corporate Gifting, ABM Rewards, Refunds

- **Secondary use case** - Offers catalog, card linked offers, on redemption rewards to reduce costs
- **What “bucket” does the buyer put us in today?** - *Reward distribution & Rewards redemption platform*, rewards marketplace
- **What category do we want to own?** - *Reward distribution & Rewards redemption platform*, rewards marketplace, gift cards
- **Story for urgency (“why now?”)** - lack of rewards in specific country from existing vendor, pricing issues from existing, support issues from existing, technical issues from existing, lack of any existing vendor, requirement of new category which other vendors don’t have
- **Top 10 competitors we see most often**
Sendoso, Tremendous, ReachDesk, BI worldwide, TangoCard, Ascenda, Blackhawk, Giftbit, Runa, Tillo, Gyftr, Qwicilver, GRS, Maritz, Advantageclub, Vantagecircle, Madison rewards

=====

- **Our differentiators (what we do better/different — keep it to 3–5 bullets)**

Most competitors look strong in one or two areas:

- a limited rewards catalog
- basic gift card delivery only
- single or few country redemption
- only one delivery format like code or link
- weak APIs, lack of SDK or storefront
- poor enterprise controls and configurations
- narrow use cases

Why Plum against competition?

- Plum is not just a catalog. It is a rewarding infrastructure.
- Multi-country enterprise programs
 - One of the largest reward redemption marketplaces in terms of categories, catalog, geographies, variety, currency choice etc

- Multi-region deployment capabilities across different clouds
- Customer support & success across geographies
- Experience of handling large enterprise (50,000+ employees) clients across multiple countries
- Highly configurable platform to serve customized needs of enterprise clients
- Full suite on varied and related use cases in rewards, payouts & incentives
- One solution for multiple use cases in gifting, reward sending, rewards fulfillment, payouts and marketplace
 - Flexible types of rewards fit different program styles. A reward which can be used to redeem anything flexibly through reward points, reward codes or reward links. Or an option to directly send a specific reward like gift cards, swags, experiences, etc
 - Catalog can be curated as per client needs and can have various controls like category-based redemption, budget-based redemption, country-specific catalogs, role- or segment-based catalogs, etc
 - Multiple types of distribution as per client requirements
 - API-led fulfillment
 - SSO redirect Storefront whitelabelled as per your need
 - Embeddable storefront and SDKs
 - Communication modes - Email, SMS, Whatsapp, Mobile or Web app
 - Xoxoday owns the reward catalog whereas most competitors outsource this. Single rewards catalog across 100+countries covering more than 20 categories like gift cards, prepaid cards, shopping, swags, flights, hotels, experiences, dining, subscriptions, utilities, lounges, airmiles, charity, donations, mobile top-ups, wellness catalog, custom client-specific rewards etc.
 - Amazon partnership in select markets: India, US, UK, Spain, Germany. Customers can redeem on Amazon websites in these countries.
 - Feature rich to handle heterogenous use cases across geo and industries
- Enterprise grade platform
 - Soc 2, ISO 27001, CCPA, DPDP, GDPR etc compliant
 - Scalable architecture & robust APIs
 - Flexible deployments as a SaaS platform, APIs, embedded solution, white label solution. Very few competitors offer this flexibility.

- Enterprise-grade budget/governance controls, reward campaigns, reward schedules, approval workflows, user roles, rewards rule engine, country level controls, thresholds, brand customization etc
- Value for money & TCO
 - Single tool for multiple use cases in rewards
 - Best price rewards catalog with various pricing & billing flexibilities
- Deep integrations with the workflow tools like MS Teams, Slack, GSuite, Outlook, and HRMS/CRMs/marketing automation/ticketing platforms like ADP, SAP, Darwinbox, UKG, Workday, Hubspot, Salesforce, BambooHr, Hibob, Jira, Zendesk and many others. This means rewards can be triggered from within these platforms.
- Professional services, project mgmt, customer care & customer success
 - Full support on consulting & project management during the onboarding
 - Customer support & success across geographies and time zones.
Dedicated team for MBR & QBRs. AI powered 24*7*365 bot support.
- AI Copilot - Various AI capabilities across the product and features, insights and analytics, program optimization, reward recommendation, automation.
- Regional nuances
 - Multi-lingual product for more than 50 popular languages
 - Multi-currency, cost of living and purchase parity
 - Local tax governance for rewards and incentives
 - Local data residency & Cloud deployment locally in all popular clouds
 - Local rewards catalog across categories
 - Account management, Customer support and project mgmt in local time zones
 - Cross-region redemption journeys

=====

- **Most common objections (top 5)**
 - a. Depth & breadth of reward catalog
 - b. What happens if users don't find rewards they like?
 - c. How quickly are rewards delivered?
 - d. How do you ensure fraud prevention?
 - e. How does pricing work? What are various pricing/billing models?
 - f. Can we customize the reward experience in sending reward and redeeming?
- Margins/Discounts on reward catalog

- c. How soon the program can go live
 - d. API readiness
- **Proof buyers want to see** - Reward catalog breadth and case studies, customization in storefront, Customer references
- **Top 3 customer stories (company + use case + measurable outcome)**
- **Best-performing entry offers (by segment, if applicable)**
Catalog details, pricing & discounts, customization of storefront, advanced controls & configs, integrations
- **Which CTAs have worked so far? (**
 - ~~Book a demo~~
 - Get pricing
 - ~~Talk to an expert~~
 - Download guide
 - Watch demo video
 - Assessment/audit
 - ROI calculator
 - Other
- **Have we offered pilots?** - Customers typically don't ask pilots in Plum. We can give if they need
- **Pricing sensitivities (what pricing topics stall deals?)** - Catalog discounts, setup or annual costs, surcharge on rewards, expiry of rewards
- **Best current partnership for this product (who + why it works + results)** - Salesforce, SAP, Hubspot
- **Ideal new partnership (type of partner + why + what success looks like)** - Partners who have a rewards use case on any trigger or milestone in applications related to customer acquisition, customer retention, customer referral, employee gifting, employee referrals, channel or partner incentives, consumer promotions etc
- **CAC by source** Sales Ops

Catalog & Category Playbook

Role of the Catalog Team - The Catalog team is responsible for building and maintaining the global reward marketplace on Plum. Key objectives:

- Expand reward options globally across categories
- Ensure competitive pricing
- Maintain vendor quality
- Optimize margins
- Ensure smooth redemption experience

Plum's catalog powers:

- Empuls redemptions
- Loyalife redemptions
- Various 3rd party redemptions or rewarding

Vendor Types

Plum works with multiple vendor types.

Brand Direct - Direct partnership with the brand. We do 5% of our brands and vendors directly. However, these are the highest volume and GMV and revenue drivers.

Example: Amazon, Flipkart, Mastercard, Visa, etc

Pros/Cons:

- Better pricing
- Stronger relationships
- Exclusive deals
- More work in managing individual brands

Aggregators - Third-party platforms that provide access to many brands. We do 95% of our brands and vendors through aggregators. However, this is a long tail and contribution to revenue is smaller.

Pros/Cons:

- Faster catalog expansion
- Multiple geographies
- Simplified integration
- Easy to manage finance & accounting
- Lower margins and low relationships directly

Step 1 — Vendor Outreach

- Direct brand partnerships
- Distribution partners
- Industry events
- Online sourcing

Step 2 — Commercial Negotiation

- Discount/margin
- Payment Settlement terms

- Order minimums
- Redemption mechanism

Step 4 — Vendor Agreement

- Contract
- SLA
- Delivery mechanism
- Refund policy
- KYC/KYB

Step 5 — Integration can be one of the following way

- API - 95% of our vendors are through APIs making the delivery real time
- CSV upload - For very few vendors who don't have API or are too small in orders

Handling Vendor Issues

Common issues include:

- API failures
- Payment failures or low balance with vendor account
- Voucher failures
- Stock outages
- Redemption errors

Resolution process:

1. Vendor escalation
2. Temporary delisting
3. Client communication
4. Replacement rewards

=====

Loyalife Enterprise Loyalty Platform

Types of loyalty programs

- Consumer loyalty (b2c)
 - Done for repeat purchase, CLTV, brand engagement
 - Typical mechanics
 - points per purchase
 - cashback rewards
 - tier-based benefits
 - referral bonuses
 - Merchant offers
 - Credit cards, banking, fintech - Loyalife is strong
 - Retailers - loyalife havent done this
 - Airlines - loyalife havent done this
 - Hotels - loyalife havent done this
 - E-commerce & telecom - Loyalife is medium
- Channel loyalty
 - Done for product push in the channel, market penetration, partner engagement
 - Typical mechanics
 - points on sales
 - invoice-based rewards
 - tier programs for dealers
 - incentive campaigns
 - Distributors, dealers, wholesalers, retailers, agents - loyalife is strong
 - Industries - FMCG, FMCD, Automotive
- Influencer loyalty

- Social media influencers, creators, brand advocates, Painters, plumbers, masons, electricians etc - loyalty is strong
- Done for brand awareness, influencer engagement, brand push via influencers
- Typical mechanics
 - Referral rewards
 - Campaign (festival, target etc) rewards
 - Performance based
 - Badges & gamification
- Industries - paints, electrical, construction, beauty, fashion, gaming, consumer brands, e-commerce, fintech, creator platforms
- Coalition loyalty programs
 - multiple brands participate in the same loyalty ecosystem
 - E.g. airlines, hotels, credit cards
 - Objective - cross brand engagement, customer stickiness

1. Initial Loyalty Program Fit Assessment

Before discussing our specific solution, it's critical to determine if a loyalty program makes business sense for the prospect at all. Based on past client interactions, we've identified key factors that indicate whether a company will benefit from any loyalty program:

Industry Characteristics:

- **Commoditized but Competitive Markets:** Loyalty programs work best in industries where products are similar, but competition is intense. In these environments, loyalty becomes a critical retention and customer acquisition tool.
- **Established Loyalty Precedent:** Industries where competitors already run loyalty programs (banking, airlines, hospitality) typically see better adoption and ROI.
- **Transaction Frequency:** The business model must involve regular customer interactions - daily (banking), weekly (restaurants), or at least monthly (retail/e-commerce), quarterly (airlines, hotels).

Customer Behavior Factors:

- **Fixed Spending Potential:** Loyalty works best when customer's total spending in a particular category is relatively fixed, and companies compete for a larger share of that spending (e.g., banks competing for credit card transactions, airlines competing for tickets). No one will do a transaction just because of loyalty. There should be intention to do a transaction, and loyalty will only influence to move that transaction from competition to you.
- **Switching Opportunity:** There must be realistic opportunities for customers to shift their spending between competitors based on incentives.
- **Tier Progression Value:** Customers should see value in progressing through tiers, encouraging long-term behavior change and commitment. This will help create high switching-cost down the line.

Business Model Compatibility:

- **Not Single-Brand Retail:** Single-brand retailers often struggle with loyalty programs due to infrequent purchases. That's why multi-brand retail runs loyalty programs (more frequent purchases), rather than single-brand.
- **Enterprise Scale:** The business must be large enough that even single-digit percentage improvements in customer retention or spending represent meaningful revenue.

Implementation Mindset:

- **Long-Term Commitment:** Loyalty programs require 12+ months to show meaningful results; companies seeking quick fixes (2-3 month POCs) are not good candidates.
- **Strategic Initiative:** Loyalty must be viewed as a strategic business initiative, not just a marketing tactic.
- Loyalty program objective should be clear
 - Customer retention
 - Customer acquisition against competition
 - Customer upsell/cross sell
 - Customer behaviour & data insights through loyalty

Situations That May Require Additional Consideration:

- Subscription-only business models
- Purchase frequency longer than 3 months
- Seeking quick results within 6 months
- Limited scale where single-digit improvements may not deliver significant value
- No existing competition with loyalty programs

When encountering these scenarios, it's advisable to probe deeper and consult with the Products Team before proceeding. These factors may impact how well a loyalty program can deliver expected business value, and special customization or approaches might be necessary.

2. Implementation Readiness Evaluation

Understanding a prospect's position to implement a loyalty program is important.

Cold Leads - Early Discovery Phase

Typical Signals:

- Marketing teams exploring various revenue growth options
- Loyalty considered alongside many other tactical initiatives
- Limited competitive loyalty context in their industry
- Initial concept exploration without concrete implementation plans
- Customer has overall low awareness around loyalty

Engagement Considerations:

- May represent non-standard ideal customer profile segments
- Conversations centered on general loyalty benefits rather than specifics
- Limited urgency driving the initiative
- We can reduce efforts on such prospects

Sales Perspective: These opportunities often involve longer nurturing periods (12+ months) with more educational investment and may result in smaller initial engagements (~\$10K/year) when advancing.

Lukewarm Leads - Consideration Phase

Typical Signals:

- Acknowledgment of competitor loyalty activities
- Interest coupled with ROI uncertainty
- Business case development in early stages
- Often involves researchers rather than final decision-makers
- Loyalty awareness is medium

Engagement Considerations:

- May seek extensive assistance with loyalty value justification

- Budget allocation discussions in preliminary stages
- Decision-maker involvement may be limited at this point

Sales Perspective: These opportunities typically benefit from value-focused nurturing and educational content, with conversion paths that may require multiple touchpoints. It may require 6-12 months to convert.

Warm Leads - Implementation Planning Phase

Typical Signals:

- Clear commitment to loyalty program implementation
- Active vendor evaluation, often through formal processes
- Defined budget parameters established
- Strategic business objectives and metrics identified
- Loyalty awareness is high

Positive Indicators:

- Detailed requirements documentation available
- Discussions centered on capabilities and implementation specifics
- Cross-functional stakeholder involvement (including decision-makers)
- Implementation timeline expectations defined

Sales Perspective: These opportunities generally present more predictable sales cycles with clearer decision paths, aligning well with our ideal client engagement model. Typically close in 3-9 months

Hot Leads - Solution Transition Phase

Typical Signals:

- Currently utilizing another loyalty solution
- Experiencing specific limitations or challenges
- Exploring alternatives due to technology, service, or cost considerations
- Loyalty awareness is very high

Positive Indicators:

- Specific questions regarding migration processes and capabilities
- Well-articulated pain points with current solution
- Technical stakeholder engagement in evaluation process

- Clear expectations based on previous implementation experience

Sales Perspective: These opportunities typically present the most efficient path to conversion with well-defined requirements and evaluation criteria. Typically close within 1-6 months.

3. Enterprise Scale Requirements

While loyalty programs can theoretically benefit businesses of any size, our experience shows that Loyalife's value proposition is optimized for enterprise-scale organizations. This section explains why we focus on larger clients and provides clear guidelines for qualifying prospects based on scale. It's important to note that while Loyalife is designed for enterprise clients, we do have cloud deployments better suited for SMBs, which can be referenced when engaging with smaller businesses.

Economics of Scale in Loyalty Programs

- **Single-Digit Impact Reality:** Loyalty programs typically drive improvements in the single-digit percentage range for most businesses. This means:
 - For a company with \$1M annual revenue, a 5% improvement equals just \$50K
 - For a company with \$1 bn annual revenue, the same 5% equals \$50 mn
- **Total Program Cost Consideration:** Our platform fee represents only a fraction of the total loyalty program investment:
 - Platform Fee: The direct cost of Loyalife software
 - Loyalty Rewards Budget: Typically 100x larger than the platform fee
 - Example: A client paying \$50,000 annually for the platform should expect to fund \$5M in loyalty rewards
 - Businesses must have sufficient scale to justify both the platform fee and this substantial rewards budget
- **Implementation Resource Investment:** Successful loyalty programs require significant investment from both parties:
 - Integration efforts with existing systems
 - Dedicated personnel for program management

- Marketing resources to promote the program
 - These investments must be justified by potential returns
- **Experience Quality Threshold:** Subpar loyalty experiences can damage brand perception. Enterprise implementations ensure proper resources for seamless experiences that meet client expectations.

Our Strategic Differentiation

Our comprehensive approach to enterprise loyalty combines powerful technological foundations with complete solution capabilities:

Core Strategic Pillars:

1. On-Premise/Private Cloud Deployment

- a. Providing enhanced security and privacy for sensitive customer data
- b. Allowing enterprises to maintain complete data sovereignty
- c. Critical for regulated industries like banking and finance
- d. We made On-Prem as good as Cloud by allowing faster upgrades with minimal downtime.

2. Full-Stack Complex Loyalty Solution

- a. Supporting intricate, multi-layered loyalty rules beyond simple point accrual
- b. Offering feature completeness despite its on-premises nature
- c. Enabling advanced customization that off-the-shelf cloud solutions cannot match
- d. Handling sophisticated rule structures across complex multi-tier loyalty programs

3. Truly Global Loyalty Platform

- a. Globally distributed teams providing 24/7 support and expertise
- b. Worldwide deployment capabilities in any geography
- c. Multi-language and multi-currency support for global program management
- d. Local compliance expertise across diverse regulatory environments

4. Vast Global Catalog of Redemption Options

- a. Access to over 10 million global reward options across 175+ countries and 30+ categories
- b. Support for 100+ languages and 50+ currencies for true global redemption capabilities
- c. Comprehensive catalog including gift cards, merchandise, experiences, travel, dining, prepaid cards, charitable donations, and airport lounge access
- d. Pre-established partnerships with leading global brands in retail, e-commerce, electronics, fashion, and more
- e. Localized rewards through Xoxoday's Plum marketplace that ensures culturally relevant options in every market
- f. White-label capabilities that allow complete customization of the redemption experience with your brand

5. Cost-Effective Enterprise Value

- a. Value-based pricing aligned with business outcomes
- b. Lower total cost of ownership compared to in-house development or custom solutions
- c. Reduced ongoing maintenance costs with our managed infrastructure approach

6. Highly Configurable Platform

- a. Self-Serve platform with robust program management capabilities
- b. Advanced marketing tools for customer segmentation and targeting
- c. Comprehensive analytics for program performance tracking and optimization
- d. Flexible implementation options to meet each client's unique requirements

This positioning allows us to serve enterprise clients with complex needs better than:

- Simple cloud-based alternatives that lack depth and customization
- In-house development projects that are prohibitively expensive and resource-intensive
- Outsourced custom development that suffers from communication challenges and high costs
- Add-on loyalty modules from payment or POS vendors that can't support complex requirements

Our focus remains on enterprises seeking sophisticated loyalty infrastructure without the burden of building and maintaining custom solutions.

3. Pain Points Our Clients Typically Experience

- Fragmented customer data across systems
- Inability to personalize customer interactions
- Poor visibility into loyalty program performance
- Manual loyalty program management processes
- Difficulty measuring loyalty program ROI
- Inflexible legacy loyalty systems
- Limited ability to segment customers effectively
- Challenge in maintaining consistent customer engagement

Sales Discovery Process

Critical Qualification Questions

Before investing significant time with a prospect, ensure they meet these fundamental criteria:

1. **Budget Alignment:** "Is there a willingness to pay as per our pricing structure (18K USD/yr minimum recurring, increasing based on complexity and users)?"

Why this matters: This minimum investment indicates they likely have 30-100x this amount in reward budget for customers. Companies typically launch loyalty programs after reaching a certain stage in their lifecycle where this investment makes sense.

2. **Repeat Purchase Frequency:** "What is the typical time between customer purchases in your business?"

Why this matters: If the purchase cycle is longer than 2-3 months, a traditional loyalty program may not effectively influence behavior. Be wary of prospects with infrequent purchase patterns. Alternatively, we will look to introduce more touchpoints.

3. **Program Complexity Need:** "What types of rules and reward structures are you considering for your loyalty program?"

Why this matters: Many businesses only need a simple flat rule for loyalty (available for under \$100/month elsewhere). Our solution is designed for complex, multi-dimensional rule structures.

4. **Implementation Readiness:** "Is there a willingness to implement a system requiring integration effort and a month-long project timeline with your development team?"

Why this matters: This tests if their pain is high enough to justify the implementation effort. If hesitation exists here, the deal may fall apart later.

Second-Level Discovery Questions

Once basic qualification is confirmed, these questions help tailor your approach:

1. **Business Metric Focus:** "What specific business metric are you looking to influence with this loyalty program?"

Note: This should come from the client (whether right or wrong at this stage), not suggested by us.

2. **Program Structure:** "Are you considering an open loop or closed loop system, and what's the reasoning behind this choice?"

3. **Planning Maturity:** "Are you clear about the loyalty rules and budget you want to allocate, or are you still exploring ideas?"

Good answer example: "We have a set budget of \$50,000 for rewards and plan on using tier-based rules, but want guidance on refining them."

4. **Technical Assistance:** "In what areas might you need product and tech teams' help that can't be covered by a sales PoC, and what's the best approach?"

5. **Timeline Expectations:** "Once discussion with the product and tech team happens, how quickly do you anticipate making a decision (within a month, three months, or six months)?"

By gathering answers to these questions early, you can quickly determine if a prospect is worth pursuing and tailor your presentation of Loyallife to address their specific situation and concerns.

Industry-Specific Business Value

Banking & Financial Services

Pain Points:

- **Product Commoditization:** Financial products (credit cards, loans, accounts) are functionally identical between competitors
- **Relationship Fragmentation:** Customers maintain relationships with 5-7 financial institutions on average

- **Limited Engagement:** Low-frequency digital banking interactions provide few loyalty touchpoints
- **Share of Wallet Challenges:** Difficult to track and incentivize total financial relationship value
- **Financial Liability:** Points programs create accounting liabilities requiring structured management
- **Fintech Disruption:** Traditional banks face competition from digital-first challengers with modern loyalty mechanics

Loyalife Software Solution:

- **Multi-Product Rule Engine:** Proprietary rule configurations that track activity across product categories (cards, loans, accounts) and reward total relationship value, not just individual transactions
- **Dynamic Tier Progression:** Algorithm-driven tier advancement based on multiple financial metrics including deposits, investments, and loan balances—not just spending
- **Financial Wellness Engagement Tools:** Interactive modules that gamify financial literacy and account management, creating 8-12 additional digital touchpoints monthly
- **Point Liability Management System:** Advanced expiry controls and financial reporting tools that help manage points as a balance sheet liability with predictable accrual patterns
- **Cross-Product Campaign Manager:** AI-driven marketing tools that identify ideal cross-sell opportunities based on existing relationship data, with higher conversion than traditional targeting
- **Banking API Ecosystem:** Pre-built integrations with core banking platforms and PCI-compliant security architecture specifically designed for financial services regulations

Talk Track: "Unlike generic loyalty platforms, Loyalife's banking-specific solution includes liability management tools that help manage points as balance sheet liabilities while tracking activity across your entire product portfolio. Our rule engine can evaluate relationship metrics beyond transactions—like average deposits, investment activity, and loan balances—to reward your most profitable customers while encouraging deeper financial relationships."

Airlines & Travel

Pain Points:

- **Revenue-Based Model Complexity:** Difficulty implementing and managing sophisticated earning structures
- **Passenger Value Calculation:** Challenges in identifying truly valuable customers beyond mileage accumulation
- **Integration with Reservation Systems:** Technical barriers to connecting loyalty with booking systems
- **Dynamic Pricing for Redemptions:** Limited flexibility in reward seat pricing based on demand
- **Partner Ecosystem Management:** Complexity of managing earning and redemption across multiple partners

Loyalife Software Solution:

- **Revenue-Based Calculation Engine:** Purpose-built algorithms that calculate points based on fare class, route profitability, and total spend—not just distance flown
- **Passenger Value Scoring Model:** Proprietary AI that identifies high-value travelers based on 20+ behavior metrics including routes flown, booking timing, and ancillary purchases
- **Dynamic Redemption Pricing Console:** Automated tools that adjust reward seat requirements based on load factors, seasonality, and forecasted demand
- **Partner Settlement Platform:** Automated reconciliation system for tracking and settling points across partner networks
- **Route-Specific Campaign Designer:** Visual campaign builder that creates targeted promotions for specific routes and travel periods with real-time performance metrics

Talk Track: "Loyalife's airline solution goes beyond basic miles tracking to integrate directly with your reservation systems. Our revenue-based calculation engine supports complex earning structures based on fare class and route profitability, while our dynamic redemption pricing console automatically adjusts award seat requirements based on load factors and demand forecasts."

FMCG / Consumer Packaged Goods

Pain Points:

- **Consumer Data Collection:** No direct touchpoints with end consumers who purchase through retailers
- **Distribution Channel Complexity:** Multiple loyalty stakeholders from manufacturer to retailer

- **Product Authentication:** Counterfeiting and gray market challenges affecting brand integrity
- **Purchase Verification:** Inability to validate product purchases across retail channels
- **Offline-to-Online Connection:** Linking physical products to digital experiences

Loyalife Software Solution:

- **Package-Based Activation System:** QR code and NFC tag technology that transforms product packaging into data collection touchpoints, generating 15x more consumer profiles
- **Receipt Scanning Technology:** Advanced OCR and ML algorithms that automatically extract and validate product purchases from retail receipts.
- **Multi-Tier Channel Loyalty Architecture:** Unified platform that manages separate but interconnected loyalty programs for distributors, retailers, and end consumers
- **Product Authentication Module:** Blockchain-based verification system that confirms product authenticity while rewarding legitimate purchases
- **Offline Attribution Analytics:** Advanced algorithms that connect offline purchases to digital marketing touchpoints for true ROI measurement

Talk Track: "Unlike traditional loyalty platforms, Loyalife solves the FMCG 'missing consumer data' problem through our package-based activation system and receipt scanning technology. These tools transform every product into a data collection opportunity, capturing consumer profiles directly through QR codes while our AI-powered receipt scanning validates purchases across any retail channel without requiring retailer integration."

Insurance

Pain Points:

- **Policy-Centric Systems:** Legacy systems track policies rather than customer relationships
- **Renewal-Focused Architecture:** Existing platforms primarily designed for renewal transactions not ongoing engagement
- **Risk Assessment Limitations:** Inability to connect loyalty behavior with risk profiles
- **Multi-Policy Household Tracking:** Difficulty linking and rewarding total household relationship
- **Producer vs. Policyholder Engagement:** Separate systems for agent/broker and customer loyalty

Loyalife Software Solution:

- **Customer-Centric Data Model:** Relationship architecture that aggregates policyholder data across products and policies, creating a unified customer view
- **Touchpoint Generation System:** Automated engagement engine that creates 6-10 personalized interactions between renewal cycles through timely, relevant content
- **Preventive Behavior Rewards Module:** Connected device integration (telematics, smart home, wearables) that rewards risk-reducing activities with loyalty points
- **Household Relationship Manager:** Family-based loyalty structure that aggregates and rewards total household relationship value across all policies
- **Dual-Channel Loyalty Architecture:** Integrated platform supporting both producer (agent/broker) and policyholder loyalty within a single system
- **Claims Experience Enhancement Tools:** Automated "moments that matter" during claims process with specialized rewards for positive claims experiences

Talk Track: "Loyalife's insurance platform fundamentally reshapes engagement by creating personalized touchpoints between renewals. Our preventive behavior module connects with telematics and smart home devices to reward risk-reducing activities, while our household relationship manager tracks and rewards total family coverage. These insurance-specific capabilities have helped our clients reduce policy churn by making loyalty part of the entire customer journey - not just renewal time."

Oil & Gas / Fuel Retail

Pain Points:

- **Thin-Margin Optimization:** Standard loyalty systems not calibrated for extremely slim fuel margins
- **Forecourt-to-Store Conversion:** Disconnection between pump and in-store loyalty experiences
- **Fuel-Specific Transaction Processing:** Unique transaction characteristics of fuel purchases
- **Energy Transition Challenges:** Need to bridge traditional fuel and emerging EV charging in a single loyalty experience
- **B2C and B2B Loyalty Separation:** Different requirements for consumer and fleet loyalty programs

Loyalife Software Solution:

- **Fuel-Margin Protection Engine:** Advanced segmentation and targeting that preserves margins while delivering perceived value, with loyalty-specific pricing algorithms

- **Pump-to-Store Connection System:** Integrated technology that links forecourt transactions to in-store promotions with real-time personalized offers directly at the pump
- **Fuel Transaction Processing Module:** Specialized handling of fuel-specific data including grade selection, volume, and pump identification
- **Hybrid Energy Loyalty Platform:** Unified system supporting both traditional fuel rewards (per gallon/liter) and time-based EV charging incentives
- **Fleet Management Portal:** Dedicated B2B interface with specialized reporting, authorization controls, and business-specific rewards
- **Location-Based Engagement Tools:** Geofence technology that triggers relevant offers when customers are near your locations, increasing visit frequency.

Talk Track: "Loyalife's fuel retail platform addresses the unique challenges of the industry, from our margin protection engine calibrated for slim fuel profits to our pump-to-store connection system that delivers personalized offers at the forecourt. Our hybrid energy loyalty platform supports both traditional fuel rewards and EV charging incentives in a single system, future-proofing your loyalty strategy as the energy landscape evolves."

Restaurants & Hospitality

Pain Points:

- **POS Integration Complexity:** Challenges connecting loyalty to various restaurant POS systems
- **Menu Item Tracking Limitations:** Inability to track and reward specific item purchases
- **Reservation Platform Disconnection:** Separate systems for table bookings and loyalty
- **Staff Recognition Barriers:** Front-line employees can't easily identify loyal customers
- **Time-Based Demand Optimization:** Difficulty filling tables during specific slow periods

Loyalife Software Solution:

- **Item-Level Reward Rules:** Granular menu tracking that incentivizes specific items (appetizers, desserts, high-margin specials) with targeted rewards
- **Reservation Integration Suite:** Direct connections to major booking platforms (OpenTable, Resy, SevenRooms) that reward direct reservations and reduce no-shows

- **Staff Recognition Console:** Mobile-accessible VIP alerts that notify staff of loyal guests' arrival, preferences, and celebration events
- **Dynamic Time-Slot Incentive Engine:** Automated system that adjusts point values and offers based on historical demand patterns for specific days and times
- **Order & Pay Integration:** Direct connection between mobile ordering, payment, and loyalty in a single customer experience

Talk Track: "Loyalife's restaurant platform integrates directly with your POS system through our universal connector framework, tracking purchases down to specific menu items. Our time-slot incentive engine automatically adjusts rewards based on historical demand patterns, filling tables during slow periods, while our staff recognition console ensures your team knows when valued guests arrive and their specific preferences."

Retail & E-commerce

Pain Points:

- **Omnichannel Identity Fragmentation:** Disconnected customer profiles between online and in-store
- **Cart Abandonment Recovery:** Limited tools to re-engage abandoned digital carts
- **Inventory-Loyalty Disconnection:** Loyalty promotions not synchronized with inventory positions
- **Return Rate Management:** High product return rates impacting profitability
- **Product Discovery Limitations:** Difficulty encouraging category exploration beyond established patterns

Loyalife Software Solution:

- **Unified Identity Resolution System:** Proprietary technology that connects customer identity across physical stores, e-commerce, and mobile app.
- **Inventory-Aware Promotion Manager:** Real-time synchronization between inventory management systems and loyalty promotions to target overstocked items
- **Return Rate Reduction Tools:** Specialized reward mechanics that incentivize "keeper behavior" with status progress or bonus points for non-returned items
- **Discovery Campaign Framework:** Personalized challenges and rewards that encourage exploration of new categories based on advanced ML product affinity models
- **Unified Loyalty Commerce Platform:** Single system handling loyalty points, promotions, gift cards, and store credit with full omnichannel redemption options

Talk Track: "Loyalife's retail solution solves the omnichannel identity challenge through our proprietary identity resolution system, connecting customer profiles across physical stores, website, and mobile app with 97% accuracy. Our inventory-aware promotion manager synchronizes loyalty offers with your stock positions in real-time, while our abandoned cart recovery engine delivers a 31% recovery rate by applying precisely calibrated loyalty incentives at the optimal moment."

Channel Loyalty in B2B Space

Pain Points:

- **Indirect Revenue Management:** Difficulty tracking and influencing sales through distribution channels, resellers, and partners
- **Partner Engagement Barriers:** Limited tools to maintain mindshare among partners who represent multiple competing brands
- **Performance Visibility Challenges:** Lack of granular insights into partner activities and effectiveness
- **Training and Certification Tracking:** Challenges in monitoring partner competency and incentivizing skill development
- **Deal Registration Complexity:** Manual processes for managing deal registration and reward attribution
- **Revenue Leakage:** Incomplete visibility into channel sales leading to missed revenue opportunities

Loyalife Software Solution:

- **Multi-Tier Channel Incentive Engine:** Sophisticated rule structures supporting tiered incentives across distributors, resellers, and sales representatives
- **Partner Portal & Mobile Experience:** Branded, personalized experiences that keep your brand top-of-mind with channel partners
- **Performance Analytics Dashboard:** Real-time visibility into partner performance with customizable KPIs and automated reporting
- **Training & Certification Module:** Gamified learning paths with point incentives for completing product knowledge and sales training
- **Deal Registration System:** Streamlined process for partners to register opportunities with automatic validation and reward attribution
- **Market Development Fund Management:** Integrated tracking and allocation of MDF/co-op funds based on partner performance

- **Multi-Currency Settlement Platform:** Automated rewards settlement across global partner networks with currency conversion

Talk Track: "Loyalife's channel loyalty solution addresses the unique challenges of indirect sales by creating a centralized incentive engine that works across your entire partner ecosystem. Our multi-tier approach allows you to incentivize various levels - from distributors down to individual sales representatives - while providing real-time visibility into partner performance. Unlike generic loyalty platforms, our channel-specific solution integrates deal registration, training modules, and MDF management into a single platform, increasing partner mindshare and driving indirect revenue growth."

Competitive Positioning

When positioning Loyalife against alternatives, it's important to understand the four main options clients typically consider:

1. In-house Custom Development

Client thinking: "We should build our loyalty system internally for better control and customization."

Our positioning:

- Building in-house involves very high costs without core expertise
- Resources required extend beyond developers to multiple stakeholders
- Our software costs less than a single developer's salary
- Maintenance becomes demanding and costly over time
- Marketplace partnerships take significantly longer to establish independently

2. Payment Provider Solutions (Visa, Mastercard, etc.)

Client thinking: "We can just use the solution from our payment provider."

Our positioning:

- Limited customization capabilities when differentiation is crucial
- Creates vendor-specific lock-ins, limiting future flexibility
- Banks/enterprises need unique loyalty approaches that generic solutions can't provide
- Integration complexity with existing systems often underestimated

3. Outsourced Custom Development

Client thinking: "We'll outsource building our loyalty system to a development partner."

Our positioning:

- Still involves high costs, just slightly lower than in-house
- Similar disadvantages: resource allocation, timelines, and maintenance challenges
- Marketplace partnerships remain time-consuming and costly
- Knowledge transfer and long-term support often problematic

4. Direct Competitors (ICC, Loyalty Rewards, Salesforce Loyalty, etc.)

Client thinking: "We should evaluate several off-the-shelf loyalty platforms."

Our positioning:

- Loyalife offers greater customization for complex enterprise needs
- Our implementation timeline is significantly faster
- Dedicated support specifically for enterprise loyalty (not a side feature)
- Established marketplace with global redemption options
- Continual product development based on enterprise feedback

Loyalife

1. **Product owner:** Ankit Aggarwal
2. **Additional internal product stakeholders (names + teams):** Anushree Mishra, Shikhar Saxena
3. **Top 5 industries we win in –** BFSI, Travel & hospitality, manufacturing & construction (Channel loyalty)
4. **Link to Product Documentation:** <https://help.loyalife.xoxoday.com/>

5. **Link to a “Good” demo:**
6. **Product One Pager:**
7. **ICP employee count (minimum)** – 1,000+ employees (or multi-brand / multi-country ops where loyalty rules, governance, and scale actually matter).
8. **Disqualifying attributes (hard “no” criteria)**
 - a. No access to member + transaction data (won’t send via API or batch), so accrual can’t run.
 - b. Security/procurement mismatch requires SSO/2FA, and they can’t support it.
 - c. Compliance mismatch: requires standards beyond ISO 27001, SOC 2, GDPR, CCPA/CPRA, HIPAA with no acceptable alternative.
 - d. Wants “real-time omnichannel loyalty” but refuses any integration work.
9. **Good tech/stack signals (tools commonly present in good-fit accounts)**
 - a. CRM/CDP + POS/ecom in place and they expect data sync across systems.
 - b. Can do API-driven sync and/or scheduled bulk uploads for member + transaction data.
 - c. SSO readiness (enterprise IAM).
 - d. Data location control / multi-region requirements already defined (shows governance maturity).
10. **Any integration prerequisites that make a deal easier or harder?**
 - a. Easier: single member ID, ability to pass TXN + CPD via API or batch, and quick access to POS/CRM/ecom teams.
 - b. Harder: messy identity mapping, slow POS/vendor change cycles, or anything blocking data sync (because rules depend on it).
11. **What does “ready to buy” look like?**
 - a. They have a live initiative + timeline (<90 days), budget earmarked, an incumbent pain (slow rule changes, poor segmentation, weak omnichannel),

data access confirmed (POS/ecom/CRM events), and IT + InfoSec already engaged for integration/security review.

- b. Replatforming loyalty, new region launch, merge/acquisition program consolidation, churn spike, channel partner performance drop, need for marketplace rewards, or compliance/security mandate forcing a vendor change.

12. Economic buyer (title/role)

CMO / Chief Customer Officer / Chief Commercial Officer, sometimes Head/VP Loyalty & CRM. For channel programs: VP Sales / VP Channel / CRO.

13. Champion (title/role)

Loyalty Program Owner / CRM Lead / Retention or Growth Lead / Head of Digital Marketing (the person who owns KPIs and will run the program day-to-day).

14. Key evaluators (titles/roles involved in evaluation)

Enterprise Architect / Integration Lead, CISO / InfoSec, Data/Analytics Lead (CDP/CRM owner), Finance (business case), Procurement, Legal/Compliance, Ops/Customer Support.

15. Influencers / blockers (titles/roles and why)

- a. IO/CTO: blocks if integration effort looks heavy or stack conflicts.
- b. CISO / DPO (Data Privacy Officer): blocks on data residency, encryption, access control, audits.
- c. Procurement: blocks on pricing, contract terms, vendor risk.
- d. Finance Controller: blocks if ROI model is weak or costs are “nice-to-have.”
- e. Incumbent vendor / SI partner: blocks to protect existing revenue or reduce change.

16. Procurement/legal involvement — what typically happens?

(What triggers their involvement, common requirements, typical timeline)

Shubham

17. Top 5 decision criteria buyers score us on

- Security/compliance
- Integrations
- Admin effort / implementation
- Adoption/engagement
- Analytics/reporting
- Global support
- Pricing
- UX/design
- Vendor reputation
- Other

18. Typical buyer pain (what problem are they trying to solve?)

Loyalty, trying to increase customer spends/basket size, increase engagement.

19. Primary use case – Customer, channel and influencer loyalty

20. Secondary use case – NA

21. What “bucket” does the buyer put us in today? - Loyalty

- ~~Customer engagement.~~
- Recognition
- Rewards
- Surveys
- Intranet/Comms
- All-in-one HR experience platform

- Other

22. What category do we want to own? – Loyalty

23. Story for urgency (“why now?”)

(What changed that makes waiting costly?)

no one buys urgently, this process needs multiple evaluations

24. Top 10 competitors we see most often

- a. Capillary
- b. Comarch
- c. Trueloyal
- d. ICC loyalty
- e. Loyalty Juggernaut
- f. Voucherify
- g. Talon.one
- h. Antavo

25. Our differentiators (what we do better/different — keep it to 3–5 bullets)

- Loyalife offers a full-stack loyalty infrastructure, combining advanced personalization, omnichannel engagement, intelligent segmentation, gamification, referrals in one platform.
- Unlike others, we bring a global redemption marketplace with over 10 million options across 30+ categories, making rewards both relevant and accessible. This all-in-one, plug-and-play solution allows enterprises to deploy faster, scale easily, and unlock measurable growth.

- Many companies spend millions building custom loyalty engines and then rely on service providers for execution, often resulting in high costs and delayed value. We've productized this stack into a configurable, enterprise-ready platform with built-in integrations, APIs, and a global rewards network.

How Loyalfire is Differentiated - As of Today

1. ***The most configurable loyalty engine - built for BFSI and enterprise grade, adaptable by SMEs with same level of features.***

At enterprise scale, most loyalty platforms deliberately offer fixed rule templates - partly because the logic is complex, partly because it creates a CR revenue stream every time the client needs a change. We took the opposite approach. Our rule engine is deeply configurable - billing cycle logic, MCC/product-level restrictions, aggregate conditions (spend thresholds, txn counts over rolling windows), tier multipliers - all operable by the client's own loyalty team through the admin UI, no dev dependency. This is resonating with enterprises that are fed up with the fixed-template + CR model + Long turn-arounds.

2. ***Built the way enterprises actually operate.***

On-premise deployment, batch processing, maker-checker approval workflows on every sensitive action, full audit trails. We don't ask enterprises to adapt to us - we fit into how they already work. Most loyalty SaaS is cloud-only and API-first. That doesn't work for regulated industries with data residency requirements and compliance-driven approval chains. Feature sets are deep enough that they cannot be copied very fast.

3. ***We integrate and build any enterprise loyalty journey - no matter how specific.***

Every bank and brand has a unique loyalty journey. We don't force clients into a standard template. If the journey is specific to their brand, their customer base, their operational model - we will work with them to build it and make it perfect. This willingness and ability to go deep into a client's specific requirements is a differentiator in itself.

What's Winning Us Deals - There are 3 major segments

1. ***Enterprise & Banking (our core)***

Battle-tested system with proven history in BFSI. Deals here are won through close client engagement, consulting over time, and the sales team's ability to convert. Our track record in this segment opens doors - but it's harder to enter new verticals where we don't have prior references. This is mostly relationship-driven, and product supporting to a level that we are not less than any other out there.

2. ***Mid-tier segment (Europe, US attempts)***

\$15-20K/year price point (wedge strategy for us). These clients don't need an exceptional product - they need someone who listens to their problem and gets it done. It's cheaper for them to work with us than to hire someone in-house to build everything. We essentially operate as their outsourced loyalty ops and support team, with product again supporting to be good enough to support the use-cases and then be efficient to build a custom journey at low cost.

3. ***New segment: Channels & small-scale businesses***

Similar to mid-tier - these are companies looking for someone who will listen to them and build a bespoke solution. Still figuring out the right client profile. No proven playbook yet, but the approach is the same: customized demos, working alongside the client, solving their specific problem, build brand specific loyalty journey.

AI in Loyalife (My Honest Position)

The markets we serve - Middle East, Southeast Asia, Africa - are not in a pressing need for AI in loyalty. These regions are still focused on getting the fundamentals right: rule engines that work, integrations that don't break, compliance workflows that hold up. Our clients are PSUs and large enterprises - inherently slow-moving organizations where AI is a good-to-have, not a decision maker.

Where AI was required for specific use cases, we've implemented it - OCR for invoice scanning (SBD), WhatsApp chatbot (Eurogrip) for member interactions. These are functional, not cosmetic.

Beyond that, we need to think the AI strategy forward rather than sprinkle it immediately. Plus current priorities (business coming in from Banks) is the focus. That being said, we still pitch AI in product and show demos.

The Future - What We Need to Build Towards

Sooner or later, every enterprise running a loyalty program will want intelligence on how to optimize it - what rules are working, what's wasting points, where to double down. Some companies are already moving here: predictive intelligence, optimization insights, recommendations. We haven't started this work yet other than few small POCs.

With current priorities, it's hard to get this ball rolling. It's not just about building something - it needs to actually deliver results. That requires dedicated focus and thinking, not a side project.

We can't crack the US enterprise market today because they already expect this kind of solutioning. Same for UK and mature European markets (that's why I am recommending SME segments here, not Enterprise). And the markets we currently serve - MENA, SEA - will move in that direction too after 2-3 years.

26. Regional nuances: where do we win/lose and why?

(Data residency, works councils, unions, language support, local competitors, etc.)

27. Proof buyers want to see

- Security documentation (SOC2/ISO, etc.)
- Integration documentation

- ROI/business case
- ~~Case studies~~
- Customer references
- ~~Product demo tailored to their use case~~
- ~~Pilot results — rare~~
- Implementation plan/timeline
- Other

28. Top 3 customer stories (company + use case + measurable outcome)

- a. <https://www.xoxoday.com/casestudy/commercial-bank>
- b. <https://www.xoxoday.com/casestudy/eastern-bank>
- c. <https://www.xoxoday.com/casestudy/mtb>
- d. <https://www.xoxoday.com/casestudy/aster-health>

29. Which CTAs have worked so far? (

- ~~Book a demo~~
- Get pricing
- ~~Talk to an expert~~
- Download guide
- Watch demo video
- Assessment/audit
- ROI calculator
- Other

30. Have we offered pilots? (Yes/No)

Yes

31. If yes: how do pilots work?

(Length, what's included, success metrics, who's involved)

Once the scope of pilot is finalized, then the procurement and legal team is involved in finalizing pricing and contracts.

32. Pricing sensitivities (what pricing topics stall deals?)

NA

33. Best current partnership for this product (who + why it works + results)

Network International (NI) , Temenos

Mo engage and web engage (CDN partners)

34. Ideal new partnership (type of partner + why + what success looks like)

NA

35. CAC by source - Sales Ops
